# MECCANO

#### The Finest Hobby in the World for Boys

The Meccano system is composed of over two hundred and fifty different parts, mostly made of steel or brass, each one of which has a specific mechanical purpose. These parts combine to form a complete miniature engineering system with which practically any mechanical movement may be reproduced in model form. More can be accomplished with Meccano than with any other constructional toy, for no other system has such possibilities. The genius is in the parts and you can commence to build models as soon as you get your Outfit home. A screwdriver, provided in the Outfit, is the only tool necessary.

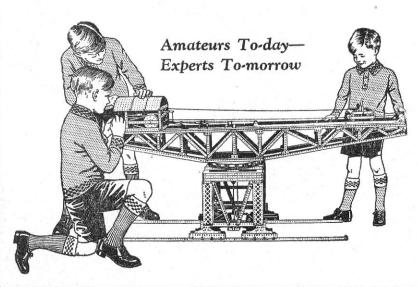

There is no limit to the number of models that can be built with Meccano-Cranes, Clocks, Motor Cars, Ship-Coalers, Machine Tools. Locomotives-in fact everything that interests boys. The most wonderful feature about the system is that it is real engineering in miniature; it is fascinating and delightful and it gives you a satisfaction beyond anything that you have ever previously experienced.

#### Model-Building with Meccano

Make the simple models first—they will provide hours of fun—and then try to improve them. Every model can be made in a dozen different ways. It is

important to screw up all the nuts and bolts tightly to ensure that your models will be strong and firm when they are completed.

Every keen and inventive Meccano model-builder should obtain copies of the special Manuals "How to use Meccano Parts" and "Meccano Standard Mechanisms." In the former the principal uses of Meccano parts are outlined, while the latter shows a large number of real engineering mechanisms, built of Meccano parts, that can be incorporated in various models. You can obtain copies of these Manuals from your dealer, or direct from Meccano Ltd.. Old Swan, Liverpool, England.

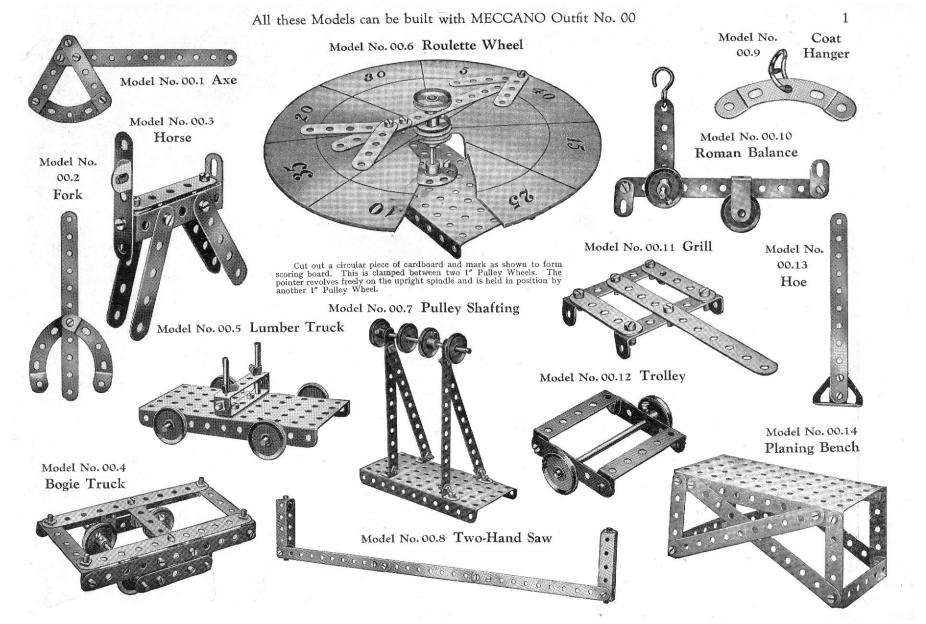

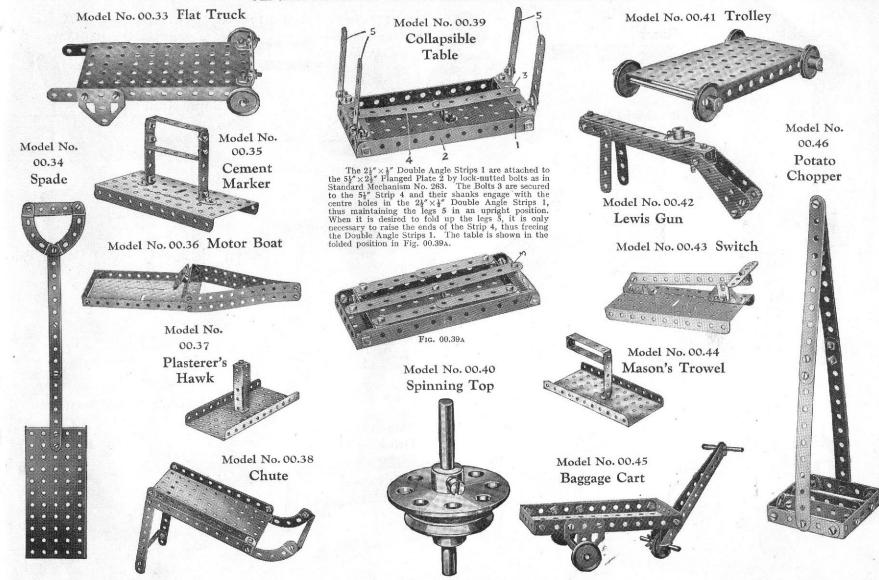

#### How to Build up Your Outfit

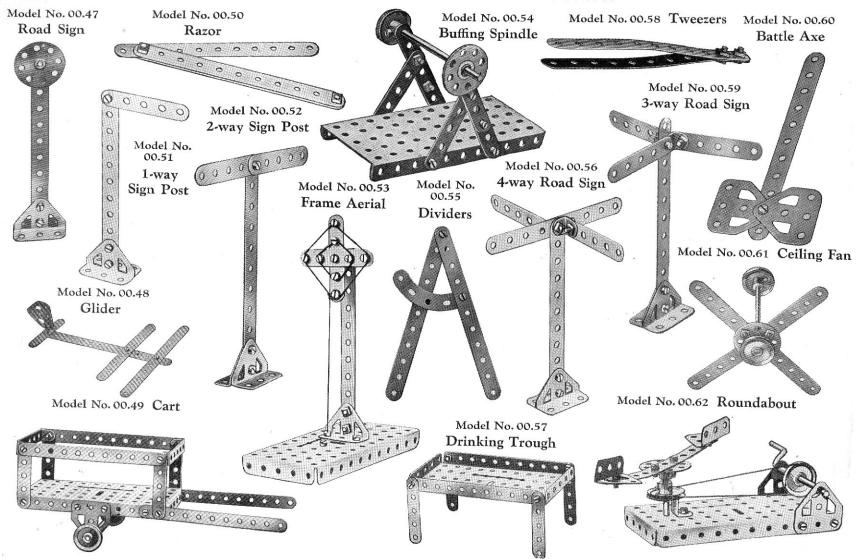

Meccano is sold in ten different Outfits, numbered 000 to 7. All Meccano parts are of the same high quality and finish, but the larger Outfits contain a greater quantity and variety of parts, making possible the construction of more elaborate models. Each Outfit from No. 00 upwards may be converted into the one next higher by the purchase of an Accessory Outfit. Thus, a No. 00 may be converted into a No. 0 by adding to it a No. 00A. A No. Oa would then convert it into a No. 1, and so on. In this way, no matter with which Outfit you commence, you may build it up by degrees until you possess a No. 7 Outfit. It is important to remember that Meccano Parts may be bought separately at any time in any quantity from your Meccano dealer.

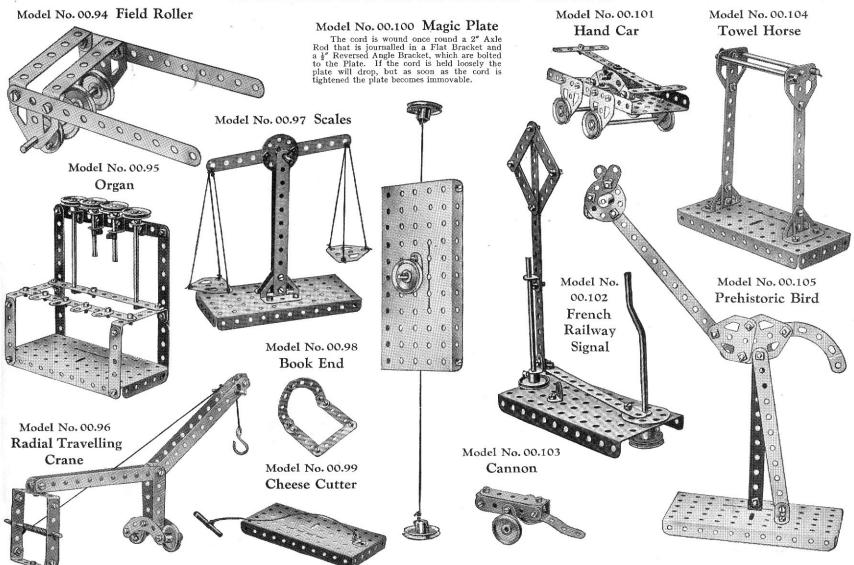

#### Meccano Service

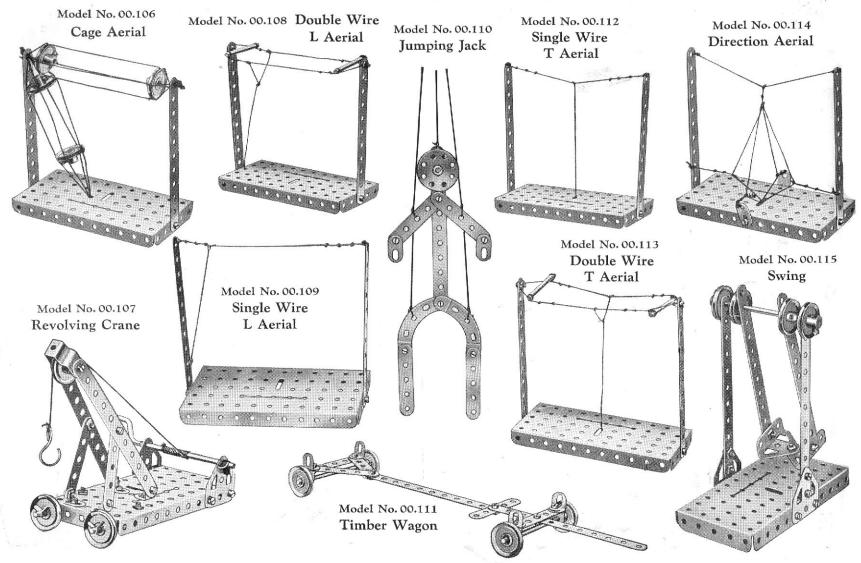

The service of Meccano does not end with selling an Outfit and an Instruction Manual. When you want to know something more about engineering than is now shown in our books, or when you strike a tough problem of any kind, write to us. We receive over 200 letters from boys every day all the year round. Although all kinds of queries are put to us on all manner of subjects, the main interest is, of course, engineering. The wonderful knowledge of engineering matters possessed by our staff of experts is unique. This vast store of knowledge, gained only by many years of hard-earned experience, is at your service. We want the Meccano boy of to-day to be the famous engineer of to-morrow.

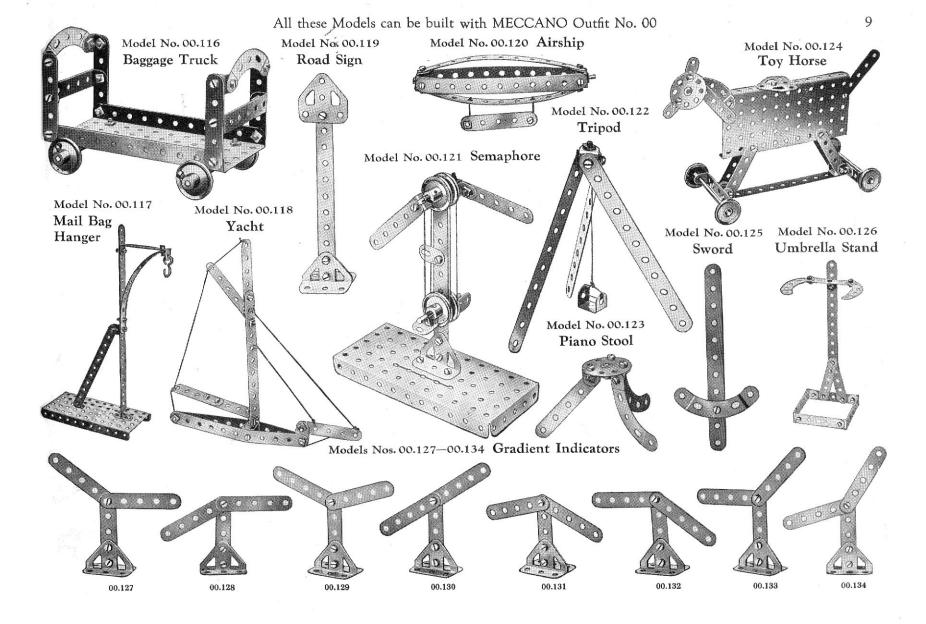

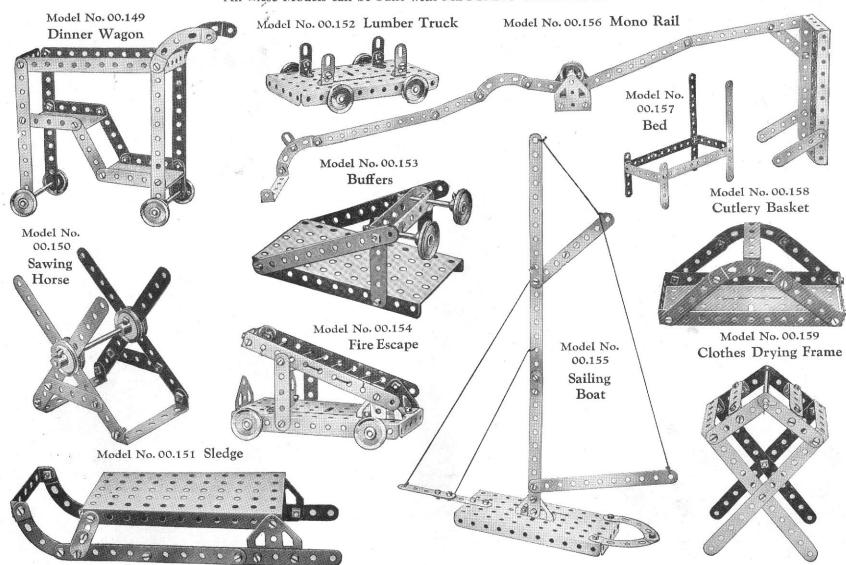

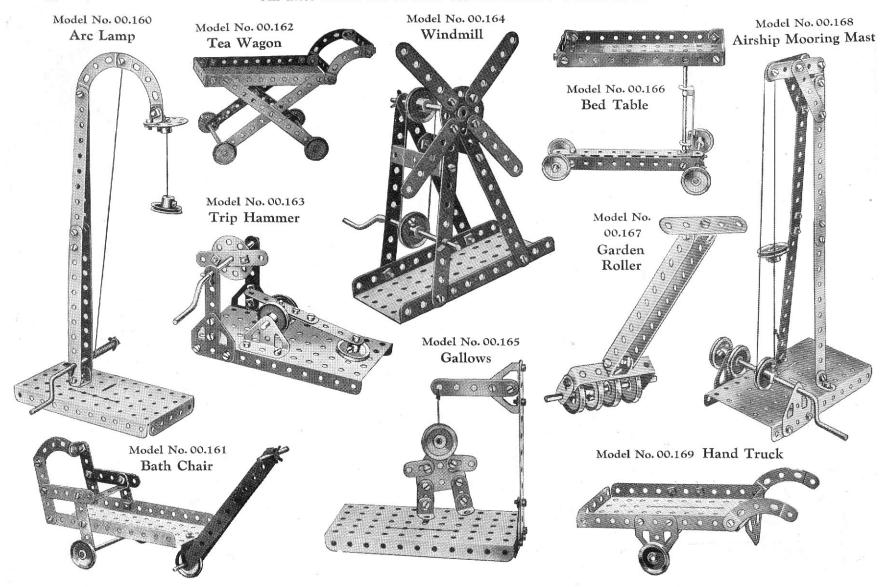

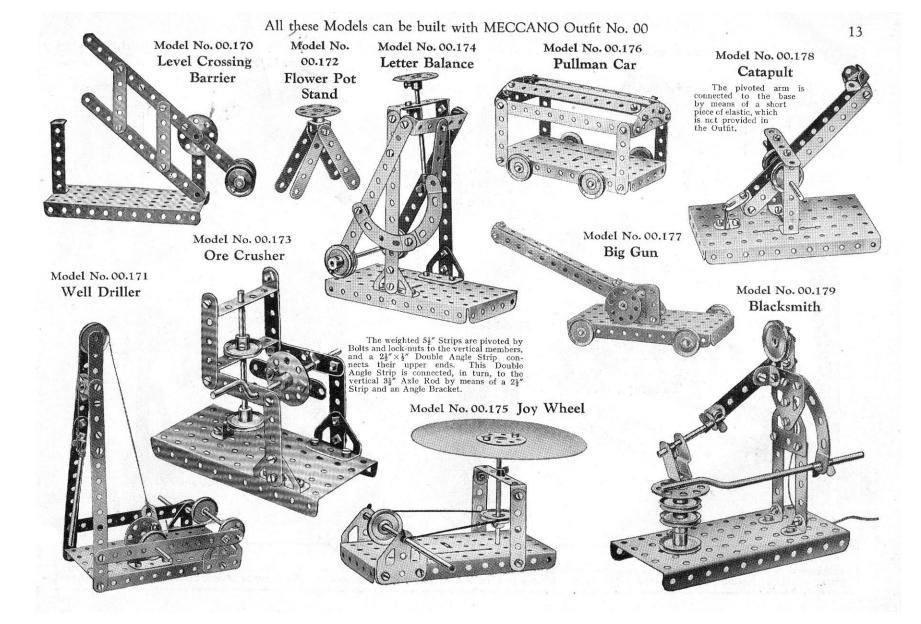

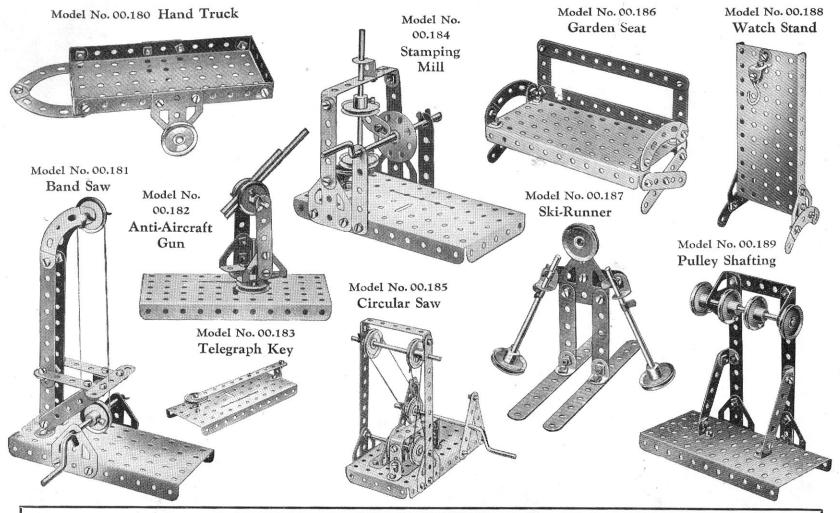

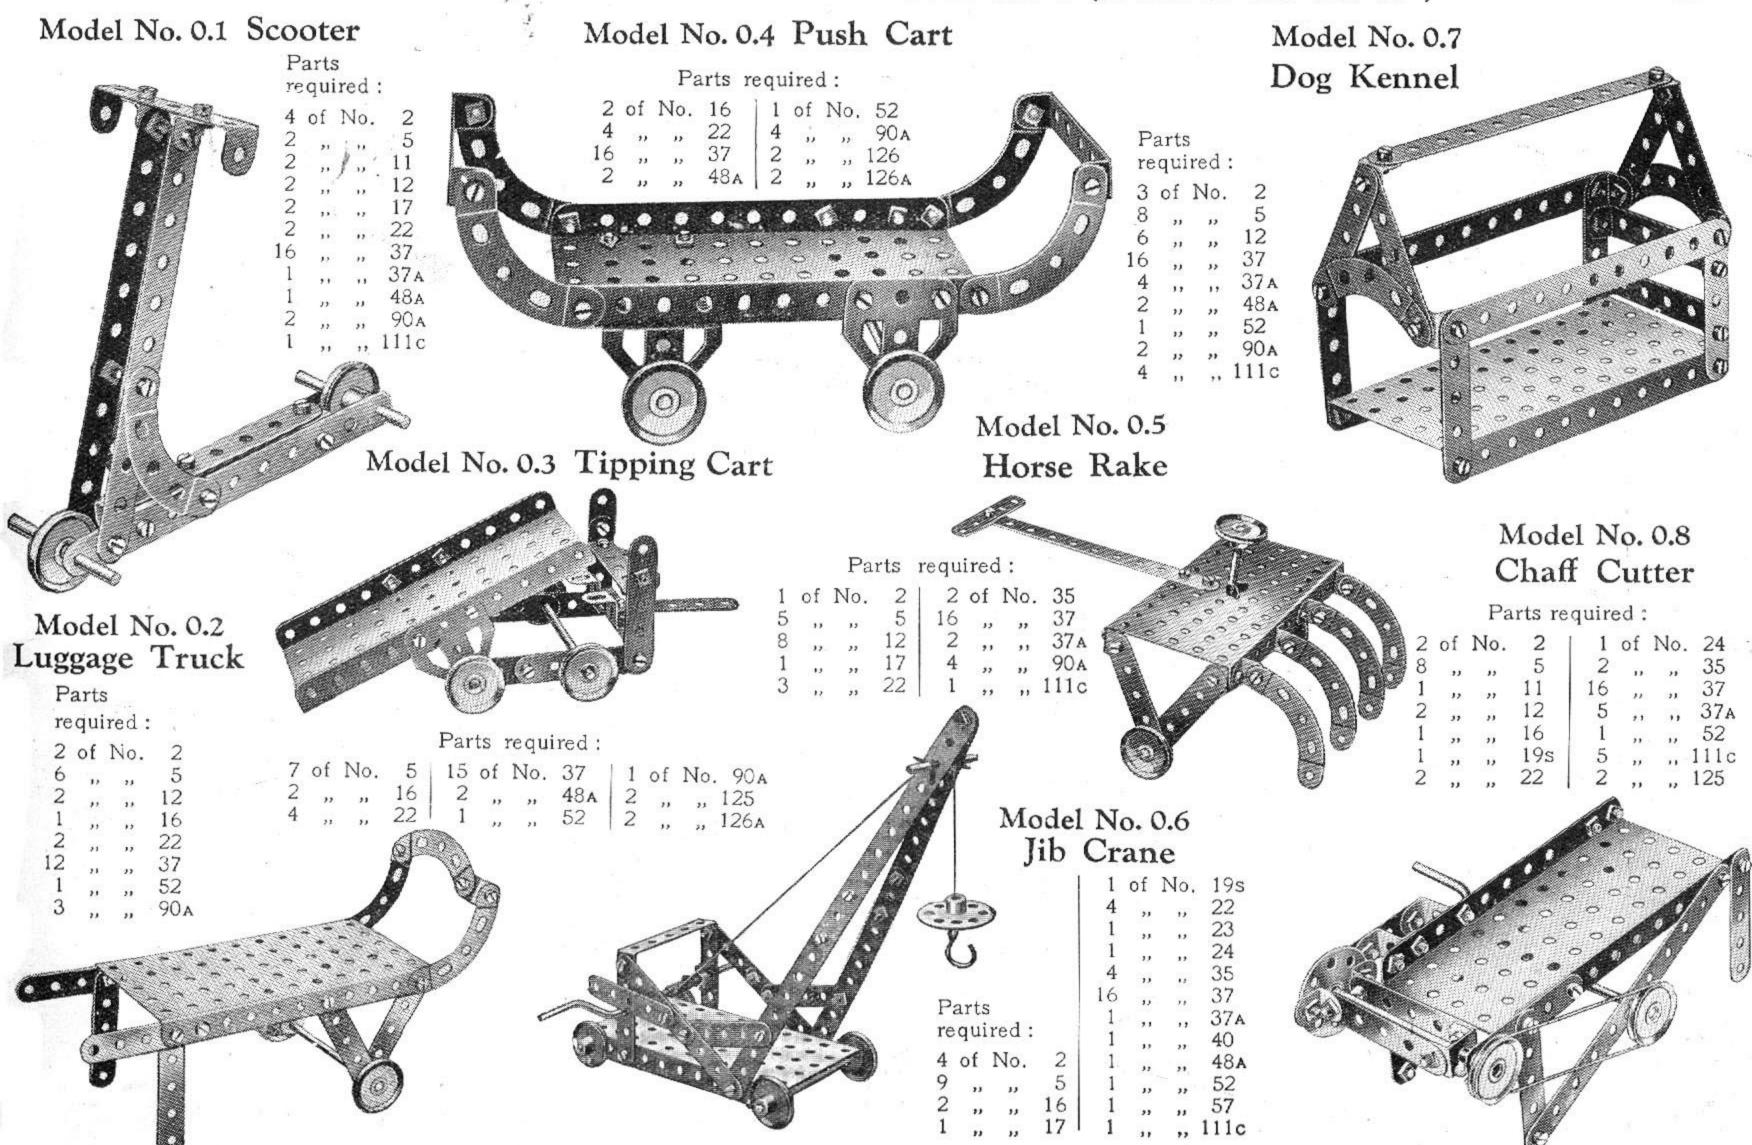

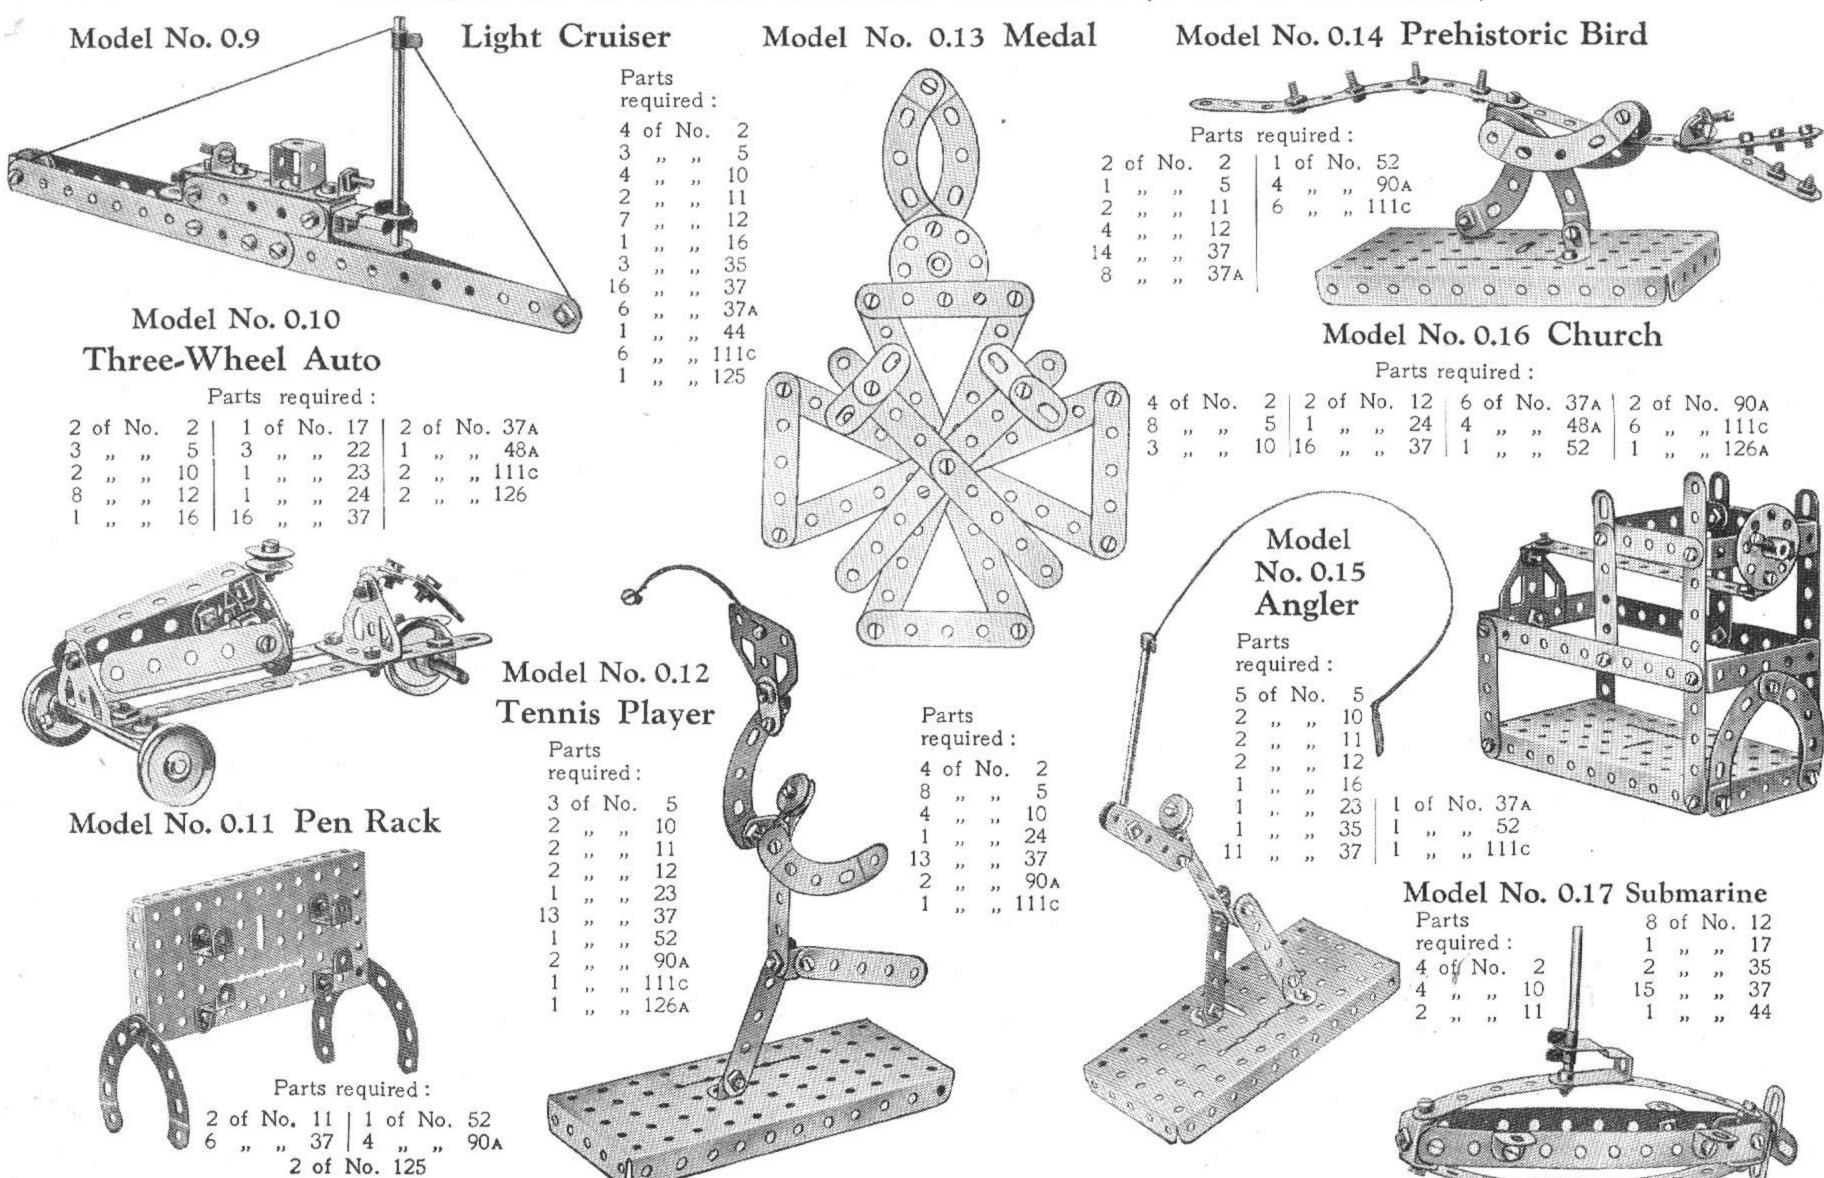

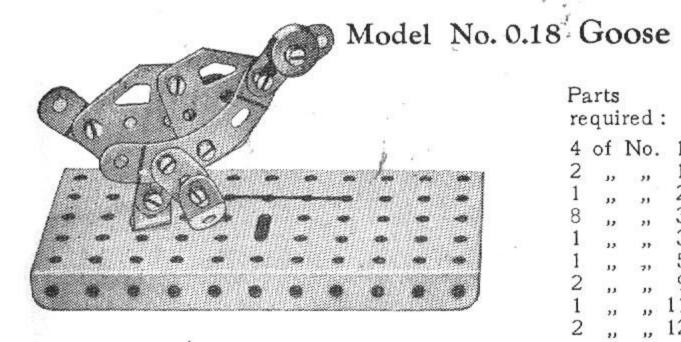

#### HOW TO CONTINUE

This completes our examples of models that may be made with MECCANO Outfit No. 00. The next models are a little more advanced, requiring a number of extra parts to construct them. The necessary parts are all contained in a No. 00A Accessory Outfit, the price of which may be obtained from any Meccano dealer.

These Models can be built with MECCANO Outfit No. 0 (or No. 00 and No. 00A)

## Model No. 0.32 Bucking Broncho

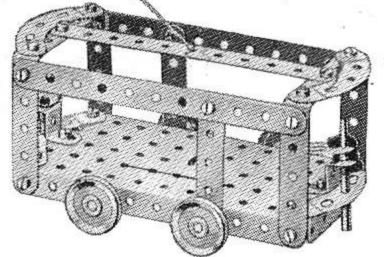

The Bolts used for connecting the 5½" Strips, the horse's legs, and the rider's legs and arms, are all lock-nutted (see

Model

Standard Mechanism No. 262). The lower  $5\frac{1}{2}$  Strip should be held rigidly and the upper one jerked forward; the horse will then throw its rider completely over its head.

#### HOW TO CONTINUE

This completes our examples of models that may be made with MECCANO Outfit No. 0 (or No. 00 and No. 00A). The next models are a little more advanced, requiring extra parts to construct them. The necessary parts are all contained in a No. 0A Accessory Outfit, the price of which may be obtained from any Meccano dealer.

## Model No. 1.1 Jockey Pulley

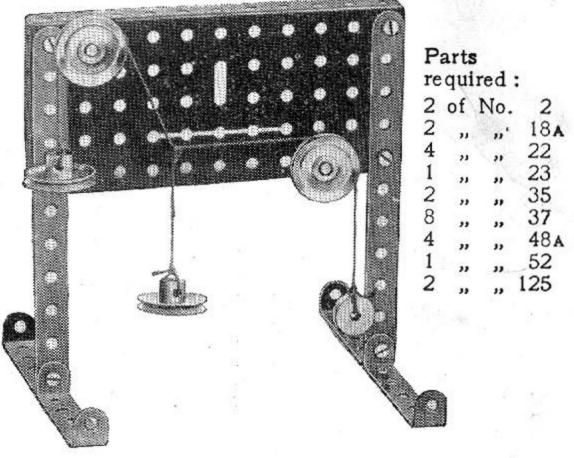

## Parts required:

1	of	No.	3	2	of	No.	35	1	of	No.	52
4	,,	,,	5	20	,,	"	37 37a	1	,,		54
2	,,	,,	17	1	,,	"	37A	2	,,	,,	111c
4	,,	,,	22	1	**	***	48 A	2	,,	,,	126

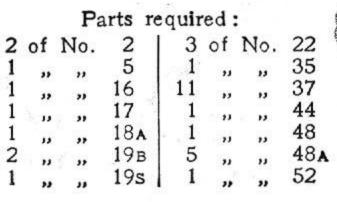

The weight of the pivoted 3½" Strip, augmented by the 1" fast Pulley Wheel, causes the jockey pulley to press on the belt. Hence the latter is kept always taut.

# Model No. 1.2 Triangle of Forces

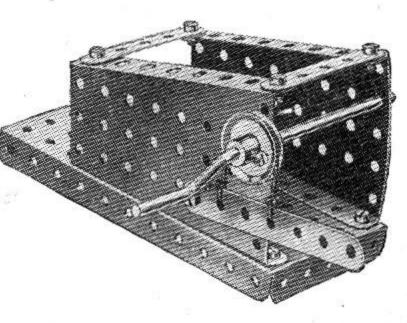

The suspended weights represent three forces acting on a central point. If a triangle is drawn with its sides respectively parallel to the three converging cords, i.e., parallel to the directions of the three forces, the lengths of the sides will be found to be proportional to the respective magnitudes of the forces.

The Strip 9 represents the saw. The Crank Handle drives through a belt 1 a short Rod journalled in a Double Bracket 2 and carrying a Bush Wheel 3. The latter imparts a reciprocating motion to the saw frame 4 through a 2½ Strip 5 loosely mounted on bolts secured to the Bush Wheel and to an Angle Bracket bolted to the saw frame. This frame slides on a 3½ Rod 6, which acts as a guide, passing through the frame and supported in a reversed Angle Bracket 7. A washer is placed on the Bolt 8 behind the Bracket 7. A vice to secure the objects in position for cutting consists of a Flat Bracket 10 mounted on a Bolt 11, a few turns of which causes the Flat Bracket to grip the object 12. The Bolt 11 enters a nut held between the Flat Trunnion 13 and 5½ Strip 14, which are spaced apart for the purpose by washers placed on the two bolts holding the Trunnion in position. The saw frame rests on the stop 15 when not in use. A 1 Pulley secured to the top of the frame acts as a weight and helps to steady the saw.

## Model No. 1.27 Dinner Wagon

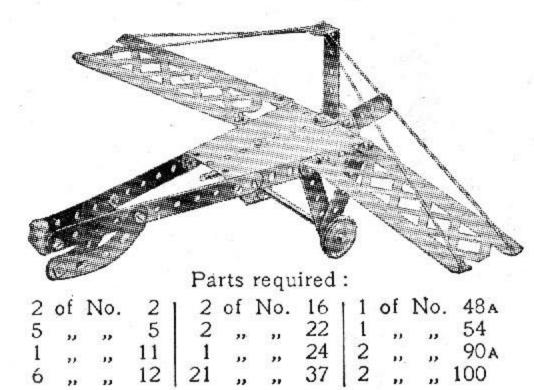

The two lower platforms are constructed out of pieces of ordinary cardboard, their outer edges resting on 2½" Double Angle Strips and their inner edges on Angle Brackets.

The  $5\frac{1}{2}$ " Strip is pivoted to the  $2\frac{1}{2}$ " Strip by means of a Bolt and two Nuts, and the  $2\frac{1}{2}$ " Strip is similarly pivoted to the Sector Plate. By revolving the  $2\frac{1}{2}$ " Strip about its pivot, the vertical  $1\frac{1}{2}$ " Rod can be made to trace a locus. If the positions of the  $1\frac{1}{2}$ " Rod and

the 5½" Strip are altered, several different loci may be traced. Machines of this type are of advantage in assisting in the design of engine connecting rods.

#### Model No. 1.85 Bow Girder

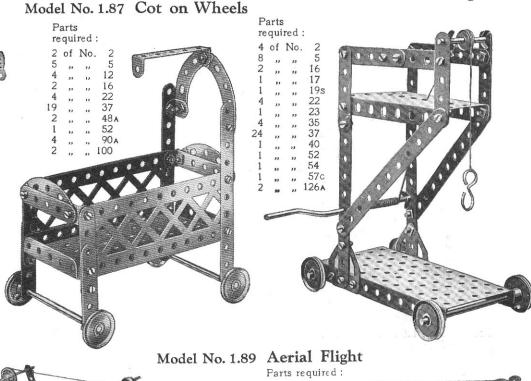

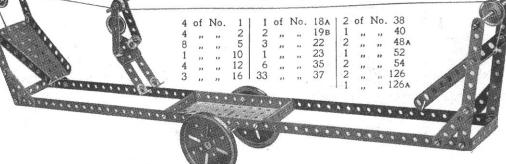

#### Model No. 1.86 Double-Action Pump

The 5½" Strip 1 is attached to the 1" Pulley Wheel 2 by means of two Angle Brackets, through the lower of which passes the Set-Screw that secures the Pulley to its 2" Rod. Two Washers are placed beneath the head of the Bolt joining the Angle Brackets in order to prevent its shank from binding on the boss of the Pulley 2. The joints 3, 4, 5, 6, 7, are all lock-nutted, the remainder of the joints being quite rigid. When the Strip 1 descends, together with the first pump, the incidental distortion of the parallelogram 3, 4, 7, 4 causes the second pump to rise. Similarly, when the first pump rises, the second descends.

#### Model No. 1.96 Ballista

This is a model of an ancient engine of war, resembling the crossbow. The 3½" Strip 1 is bolted firmly to the Double Angle Strip 2, which is prevented from turning by the addition of Angle Brackets as shown. A Double Bracket 3

slides on the Strip 1 and is secured to a piece of cord. On rotation of the Crank Handle 4, the Strip 1 is pulled backward until the Double Bracket 3 slips off its end. The Strip then flies forward and strikes the missile, which consists of a 2" Rod placed ready in the Double Bracket 5.

#### Model No. 1.97 Tight-Rope Walker

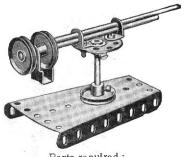

The cord on which the "Meccanitian" runs is endless and passes over the 1" fast Pulleys at each end of the model. One of the Pulleys is secured to a Crank Handle, by means of which the model may be operated. The Meccanitian runs on the upper half of the endless cord, the lower half being attached to one of his feet.

The trolley is operated by means of a cord that is wound round the 1½" Axle Rod carrying the Bush Wheel, both ends of the cord being secured to the trolley. The bucket is suspended from a cord that winds on to the Crank Handle, and it is tipped by lowering it until a short cord that is attached to the bottom of the bucket and to the trolley, becomes taut. Further lowering causes the bucket to swing over.

#### Model No. 1.112 Beam Engine

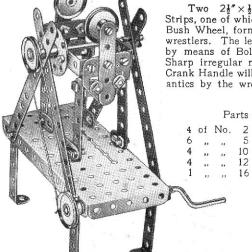

The connecting Strip 1 is attached pivotally by a Bolt and two Nuts (Standard Mechanism No. 262) to one end of the beam 2 and to the Bush Wheel 3. The Strip 4 is similarly connected to the other end of the beam 2 and to the Double Bracket 5 attached to the piston rod. The short rod carrying the flywheel 6 is journalled in a  $2\frac{1}{2}$  Strip supported by the Trunnion 7 and in a Reversed Angle Bracket bolted to the  $2\frac{1}{2}$  Strip.

A short length of elastic is doubled and stretched between the centres of the 3" Pulley Wheels. A weight, consisting of two 1" fast Pulley Wheels and a 1½" Rod, is suspended from it in the middle of the drum. When the Cum Bak is rolled along any smooth level surface, the elastic becomes twisted and stores up sufficient energy to return the drum to its starting point. If the mechanism is concealed by a thin cardboard covering, the model will cause much amusement by its mystifying behaviour.

along. His neck is a Flat Bracket: his right (or propelling) arm consists of one Angle Bracket and one &" Reversed Angle Bracket, and his left arm-the hand of which is bolted loosely to the chair-is formed by three Angle Brackets. The chair is composed principally of two Sector Plates and four 51" Strips, and it runs on three 1" Pulley Wheels-one in front and two at the back. One of these (not visible in the illustration) drives by cord another 1" Pulley Wheel, the shaft of which also carries a Bush Wheel 1. As will be seen, a 21 Strip is pivoted at one end to this Bush Wheel and at the other end to a second 21" Strip 2, which, rocking about an axle journalled through its centre

hole, is again pivoted to the

invalid's hands.

#### Model No. 1.123 Bow and Arrow

Parts required:

#### Model No. 1.124 Rotating Crane

The running wheels of this crane are journalled in Double Angle Strips bolted to the base plate and secured at an angle by means of Flat Brackets. The rear of the Base Plate is supported on a Double Bracket. The jib is bolted loosely to the supporting 5½" Strips and is connected by 2½" Strips to the Sector Plate which pivots about its supporting bolts. By moving this Sector Plate the elevation of the jib may be altered as desired. The movement is controlled by a Double Angle Strip mounted on the Crank Handle and connected pivotally to the plate by means of a 2½" Strip. A Reversed Angle Bracket bolted to an upright Double Angle Strip in the rear of the model serves to restrict the movement of the Sector Plate.

#### Model No. 1.134 Travelling Crane

The jib 1 is pivoted to the Flat Trunnions 2, which are bolted at 3 to Angle Brackets secured to a Bush Wheel. The latter is nipped to a 2" Rod 4 passing through the Plate 5 and further supported in a Double Angle Strip 6. A Washer and Spring Clip mounted on the Rod 4 below the Strip 6 secure the crane to the carriage. The jib is supported by means of cords 7 tied to 21 Strips 8, the holes of which engage the shank of a bolt passed through the Sector Plate 9, and its elevation may be altered by inserting this bolt in different holes in the Strips 8. The cord 10 of the brake lever is wound once round the Crank Handle, between two Washers.

One of the 21" Strips representing the arms of the gymnast is bolted to a Bush Wheel secured on a 31" Rod. When the Crank Handle is rotated the gymnast turns complete somersaults in a very amusing manner. The gymnast's "arms" must be pivoted to the Angle Brackets forming his shoulders by means of Bolts and Lock-Nuts.

The upper end of the Strip 1 is connected pivotally by a Bolt and two Nuts to the crosshead bracket 2. The crankshaft is built up as follows: Two Angle Brackets 3 are each secured rigidly to the boss of a Pulley Wheel and are connected to each other by a \frac{3}{8}" Bolt carrying three Nuts. The Nuts are screwed tightly against the Brackets, sufficient space being left between the inner pair to enable the connecting Strip 1 to turn freely. The valve Rod 5 is operated by the Flat Bracket 4 that is clamped between two further 1" Pulleys on the crankshaft in such a way that its protruding end serves as a cam.

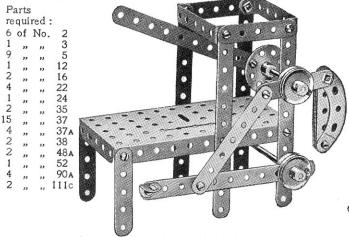

Chinese Windlass

#### Model No. 1.153 Pile Driver

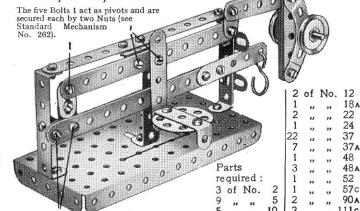

The winding cord is passed round the Pulley at the top of the model and is fastened to an Angle Bracket that is hooked under the protruding portion of a Flat Bracket bolted to the top of the driving head. When the Angle Bracket reaches the Pulley at the top it is pushed out a little, thus releasing the driving head.

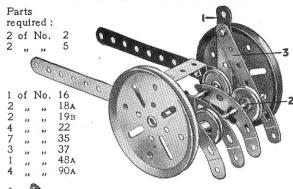

The treadle lever is connected pivotally to a 3½° Strip by a Bolt and two Nuts. The upper end of this Strip is similarly connected to a 2½° Strip that is clamped tightly between two Pulleys on the hammer Rod. Pressure on the treadle causes the hammer to descend on the work. When the treadle is released a weight pulls the hammer back to its original position.

#### Model No. 1.155 Heavy Duty Scales

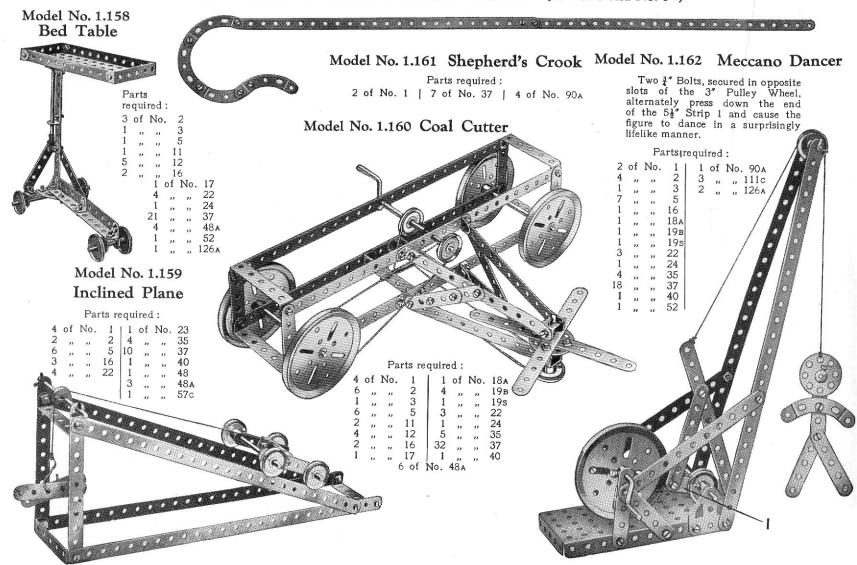

#### Model No. 1.156 Horse Rake

The 2½" Strip 1 pivots about the wheel axle. A 2½" Strip 3 is connected by a Bolt and two Nuts to the Strip 1 and the Shaft 2, which consists of two 1½" Rods, passes through its other end. On pulling the lever 1 towards the shafts the rake is lifted from the ground.

Coat Hanger

Cord is passed round the Pulley on the drill spindle 4 and thence over the Pulleys 3 and round the shaft of the Pulley 1. The lever 2 (a  $3\frac{1}{2}$ " Strip) is pivoted by a Bolt and two Nuts at its inner end to an Angle Bracket, and the latter is bolted to a  $1\frac{1}{2}$ "  $\times$  ½" Double Angle Strip which, in turn, is bolted between the vertical  $2\frac{1}{2}$ " Double Angle Strips. The arm of the lever engages between two Washers on the drill spindle, and on pressing the lever, the drill spindle with its 1" Pulley is forced downwards.

thus tightening the Cord, which then transmits the drive to the drill spindle. Immediately pressure on the lever is released, the drill comes to rest. 2

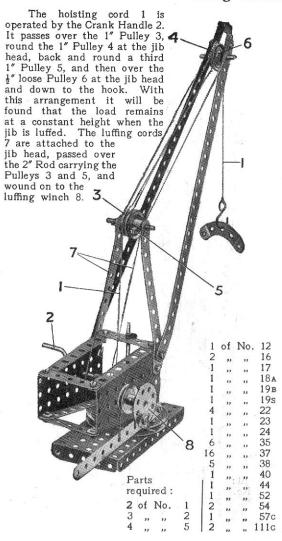

Strip, and by means of the cord shown raises the arm to indicate "danger." The Curved Strip moves to allow the end of the 5½ Strip to pass over it, and is returned to its original position by

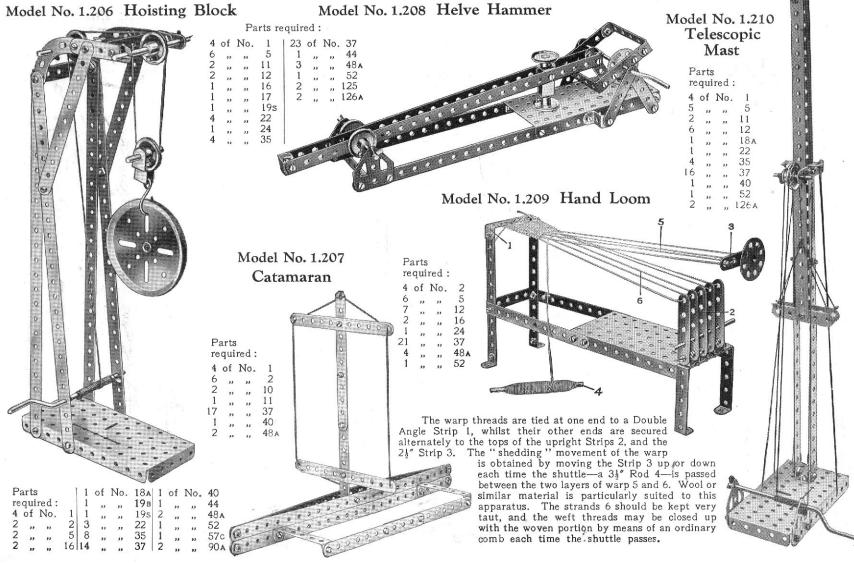

reason of its weighted end. The signal

then remains at "danger" until the

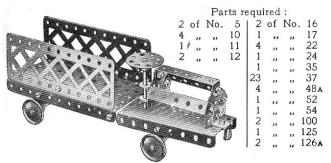

mechanism is re-set.

## Model No. 1.205 Patent Luffing Crane

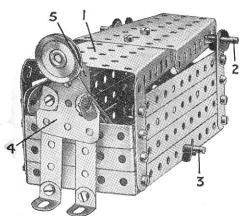

# Model No. 1.211 Motor Lorry

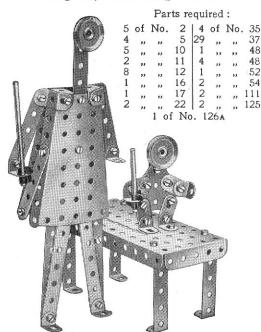

# Model No. 1.212 Disappearing Meccanitian

The bottom of the box-like portion of the model consists of a 5½" × 2½" Flanged Plate; three 5½" Strips bolted to upright 2½" Strips form each side and each end consists of three 21 x 1 " Double Angle Strips. The lid 1, which is mounted pivotally on an Axle Rod 2, consists of two Sector Plates bolted together. Elastic bands are tied to the sides of these Plates and connected to Rod 3 passed through the bottom of the box. The "Meccanitian " 4 also is connected to this Rod by pieces of elastic. On pressing the end of the rear Sector Plate the lid opens sufficiently to allow the figure to be drawn inside and then snaps back into place. A Cranked Bent Strip 5 is bolted at the back of the figure and rests against the edge of the Sector Plate.

Two cords stretched between the base plate of the model and the upper structure are passed through holes in the Double Angle Strips of the cage to form guides. A further cord is tied to the upper Double Angle Strip, and after being led over the 3" Pulley at the head of the model is tied to the shaft of a Crank Handle.

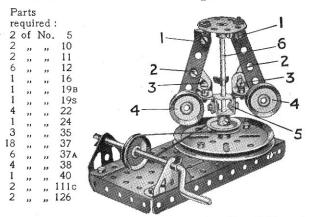

#### Model No. 1.221 Seismograph

# Model No. 1.222 Jib Crane

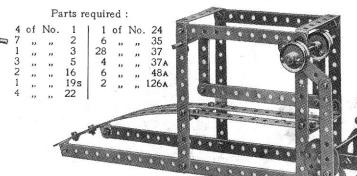

Parts

#### Model No. 1.223 Centrifugal Governor

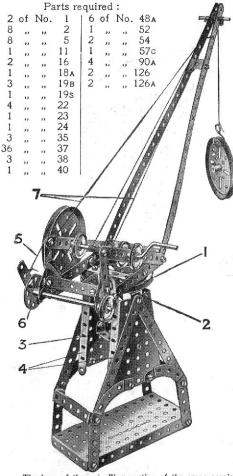

The 3" Pulley Wheel is bolted to the  $5\frac{1}{2}$ "  $\times 2\frac{1}{2}$ " Flanged Plate as shown, and the Rod 6 is free to rotate in its boss. The Bolts 1, 2, 3, are provided with lock-nuts. When the engine to which the governor is attached works at too great a speed, the 1" fast Pulley Wheels 4 fly outward and lift the two Double Brackets 5. In actual practice this movement is utilised to close the engine valves and so reduce speed.

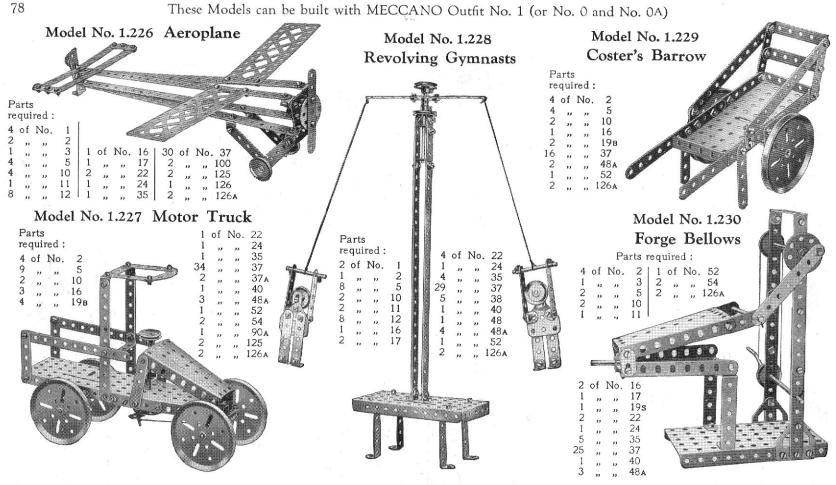

# Model No. 1.224 Stone-Sawing Machine

#### Model No. 1.225 Elevated Crane

The base of the swivelling portion of the crane consists of a 3" Pulley Wheel 1, which has a 3½" Axle Rod nipped in its boss. The Rod is journalled in two 2½" Double Angle Strips 2 and 3 secured between the Sector Plates 4. The brake cord 5 passes round the 3" Pulley as shown, and is tied to one of the holes in the Bush Wheel 6. The cords 7 serve merely to support the weight of the jib.

#### HOW TO CONTINUE

This completes our examples of models that may be made with MECCANO Outfit No. 1 (or No. 0 and No. 0A). The next models are a little more advanced, requiring a number of extra parts to construct them. The necessary parts are all contained in a No. 1A Accessory Outfit, the price of which may be obtained from any Meccano dealer.

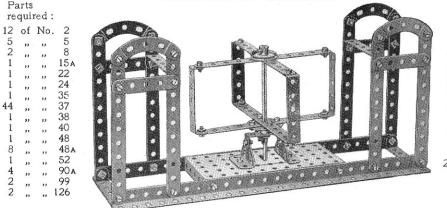

Parts

required:

#### Model No. 2.2 Turnstile

# Model No. 2.3 Coal Sifter

The  $5\frac{1}{2}$  Strip 1 is pivoted to the Angle Bracket 2 by a bolt and two Nuts. The Angle Bracket in turn is bolted to the Flanged Plate, which is suspended in such a way that it is free to swing to and fro. The other end of the  $5\frac{1}{2}$ " Strip is pivoted to the Bush Wheel 3.

# Model No. 2.7 Mat Frame

The Strips 1 are hinged to the frame in the following manner. Two Cranks 2 with their bosses facing inward are bolted to the Strips 1 and two Angle Brackets are secured to the frame. A Rod is then pushed through the holes in the Angle Brackets and secured in the bosses of the Cranks. A Double Bracket fastened to the ends of the Strips 1 carries a Threaded Pin, which fits in the holes in the Flat Trunnions 3. By removing this Pin, the frame may be folded flat.

These Models can be built with MECCANO Outfit No. 2 (or No. 1 and No. 1A)

#### Model No. 2.15 Turntable

The two sides of the revolving portion are joined in the middle by two pairs of  $2\frac{1}{2}$  Strips, each pair being overlapped three holes and bolted to the 3" Pulley Wheel 1. An Axle Rod secured in the latter is journalled in the bottom plate 2 and retained in position by a 1" fast Pulley Wheel beneath the plate.

 The construction of this model is fairly clear in the illustration, but it might be pointed out that one side of the framework consists of four 12½" Angle Girders 1 while the opposite side is composed of four 12½" Strips 2.

126

#### Model No. 2.17 Roundabout

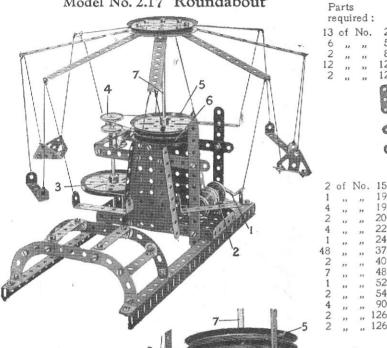

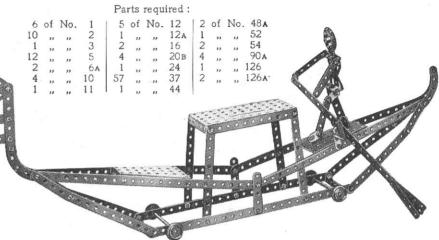

FIG. 2.17A

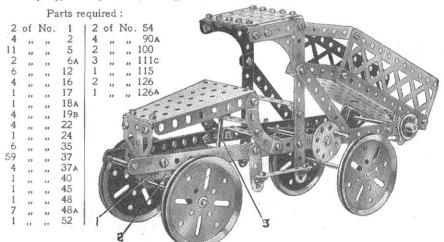

When the Crank Handle is turned, the drum 2 (formed by butting together two 3" Flanged Wheels) turns the 3" Pulley Wheel 3 by means of an endless cord. The 1" fast Pulley Wheel 4 similarly turns a second 3" Pulley Wheel 5 resting on another 3" Pulley Wheel 6 (see Fig. 2.17A). The end of the Axle Rod 7 is quite free to revolve in the boss of the lower 3" Pulley Wheel 6.

#### Model No. 2.18 Gondola

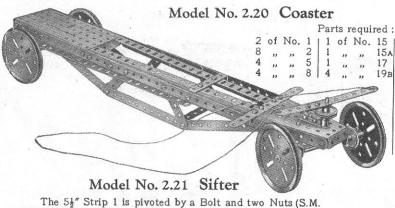

# Model No. 2.19 Tipping Motor Wagon

The tront Axle Rod is journalled in a  $2\frac{1}{2}"\times \frac{1}{2}"$  Double Angle Strip 1 which in turn is bolted to a Double Bent Strip 2. The Double Bent Strip is pivoted to the Sector Plate by a Bolt and two Nuts. Cord passing over a 1" Pulley Wheel attached to the Rod 3 is fastened to the ends of the Double Angle Strip 1, and by rotating another pulley, which represents the steering wheel, the road wheels are deflected.

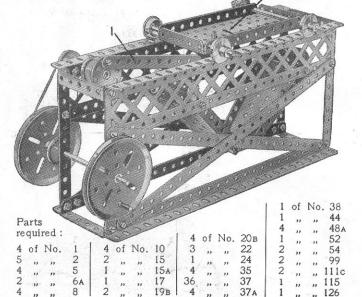

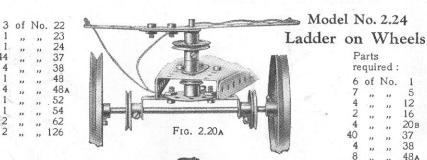

These Models can be built with MECCANO Outfit No. 2 (or No. 1 and No. 1A)

Parts required

The  $5\frac{1}{2}''$  Strip 1 is pivoted by a Bolt and two Nuts (S.M. 262) to the Bush Wheel and also to a Trunnion bolted to the under-surface of the Flanged Plate 2. The Rod carrying the Bush Wheel is journalled in one of the side girders and through a Double Bent Strip.

Each pedal of the tricycle consists of an Angle Bracket pivotally attached to a Crank 1 by means of a Bolt and two Nuts (see S.M. No. 262). The Cranks are secured to a  $1\frac{1}{2}$ " Axle Rod carrying a 1" fast Pulley Wheel 2. A cord passes round this Pulley and around the 3" Pulley Wheel 3, which is spaced away from the  $2\frac{1}{2}$ " Strips 4 by a 1" fast Pulley Wheel 5. The Double Bracket 6 (Fig. 2.42A) is attached pivotally to the lower framework by a Bolt and Lock-Nuts (S.M. 263).

This is an alternative construction of the base of Model No. 2.46, and shows how the Electric Motor may be dispensed with if necessary. Two 3" Pulley Wheels I are bolted together by four Double Brackets to form a drum on which the hoisting cord is wound. The cage is raised or lowered on operation of the handle 2, which is connected to the winding drum by an ordinary belt drive. The cage is prevented from overhauling by a hand brake that acts on the groove of a third 3" Pulley Wheel 3. The brace normally is applied by the weight of the ½" loose Pulley Wheel 4, which is secured to the end of a 5½" Strip that is bolted to the crank 5.

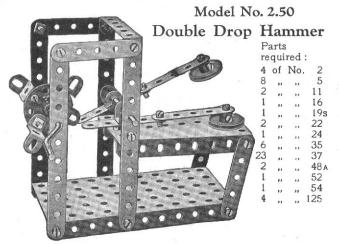

The boiler of the engine is built up of  $2\frac{1}{2}'' \times \frac{1}{2}''$  Double Angle Strips bolted to the Bush Wheel 1, and to two  $2\frac{1}{2}''$  Strips 2, which are joined together by Flat Brackets 3. A  $2\frac{1}{2}''$  Curved Strip (small radius) is bolted to the upper Strip 2. A cord is passed completely round two  $\frac{3}{4}''$  Flanged Wheels 4 secured to the steering column, and its ends are tied to the  $2\frac{1}{2}'' \times \frac{1}{2}''$  Double Angle Strip 5. The Double Bent Strip bolted to the Strip 5 is pivoted by a bolt and two nuts to the Sector Plate.

# Model No. 2.49 Revolving Truck

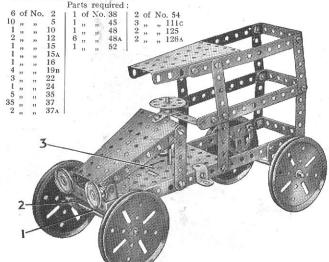

#### Parts required:

#### Model No. 2.51 Motor Van

The Axle Rod 1 is journalled in a  $2\frac{1}{2}$ " $\times \frac{1}{2}$ " Double Angle Strip 2. The latter is bolted to a Double Bent Strip that is pivoted to the Flanged Plate 3 by a Bolt and two Nuts. Steering is effected by a cord attached to the ends of the Double Angle Strip 2 and passed round a 1" Pulley Wheel fastened to the lower end of the steering Rod.

#### Model No. 2.52 Derrick

Parts

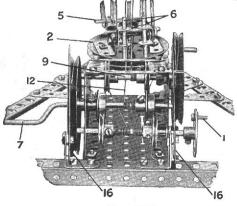

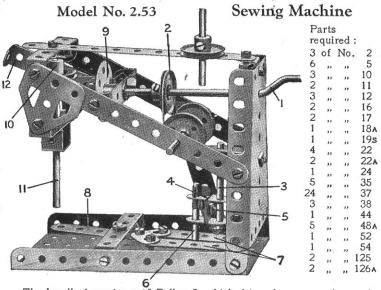

FIG. 2.52A

1 of No. 52 required: 12 12A 16 17 18A

The 3" Pulley Wheel 2, which supports the jib. is free to turn on a short Axle Rod secured in the boss of the lower 3" Pulley Wheel 2a. The vertical 121" Strips 13 are bolted at their tops to a Double Bracket, to the centre hole of which is secured a Bolt 14 that is free to turn in the Flat Trunnion 15.

The swivelling movement of the crane is carried out by turning the handle 1, which simultaneously winds and unwinds the ends of a cord passing round the 3" Pulley Wheel 2 (see Fig. 2.52A). The cord 12, which is tied to the Flat Bracket 3 at the head of the jib passes over the 2" Rod 4, under a similar Rod 5, and between two vertical 2" Rods 6, which act as guides, and is finally wound on to the Crank Handle 7. Hence on operation

of the latter the jib is raised or lowered. The cord 8 also passes round the Rods 4, 5 and 6, and is wound on to the Rod 9. Operation of the handle 10 raises and lowers the hook. The cords 8 and 12 are prevented from unwinding by bandand-pulley brakes 16.

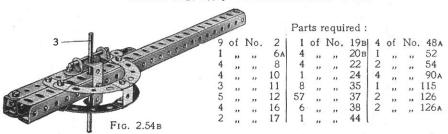

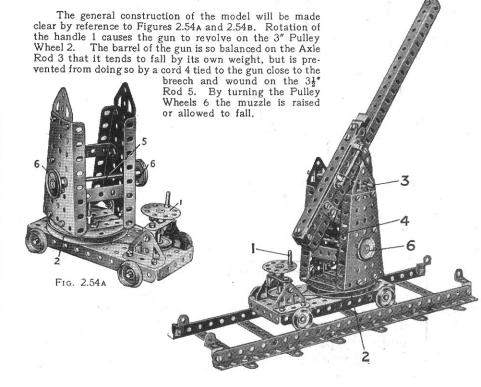

The handle 1 carries a 1" Pulley 2, which drives by means of a cord a similar Pulley on a 2" Rod 3 journalled in a Cranked Bent Strip bolted to the Sector Plate. Two Double Brackets 4 are secured together by a Bolt 5, the shank of which presses very tightly on the Rod 3. This locks the Double Brackets in position, and they revolve with the Rod 3. The outer Double Bracket carries a 1½" Rod 6, the end of which lies between two Strips 7, arranged at a short distance apart from each other and bolted to two Flat Brackets. These are secured to a further Strip 8 bolted pivotally to a transverse Double Angle Strip. As the shaft 3 rotates, the Rod 6 slides between the Strips 7 and so rocks the Strip 8 from side to side to represent the shuttle.

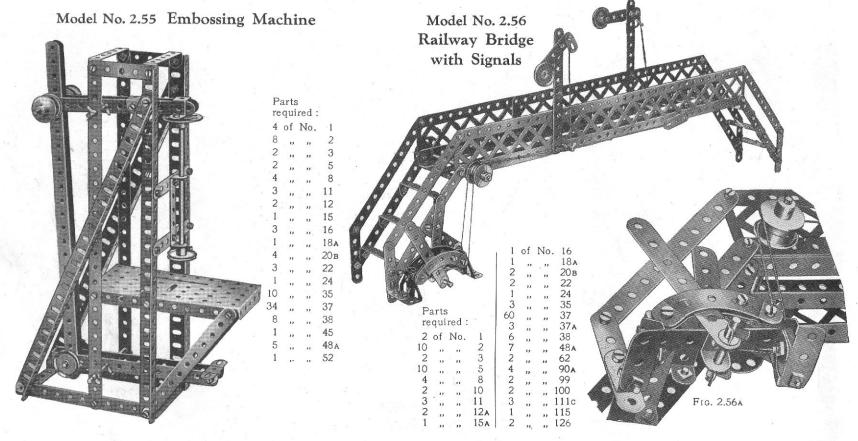

The Bush Wheel 9 carries two Angle Brackets placed together in the form of a Double Bracket, with their elongated holes overlapping, and in such a position that an imaginary line drawn through their opposite round holes, would cross the centre of the Bush Wheel. A Flat Bracket is bolted to the inner Angle Bracket in a line with the Crank Handle and forms a lever which engages i" Pulley 10 mounted on a vertical sliding Rod 11. This Rod is journalled in a Double Angle Strip bolted between the lower holes of the two Flat Trunnions and is further supported by two ½" Reversed Angle Brackets secured to the Angle Strip. As the Bush Wheel rotates, the Flat Bracket imparts to the Rod 11 a movement corresponding to the action of the needle.

The outer Angle Bracket on the Bush Wheel strikes once in every revolution the end of a Double Angle Strip 12. This is pivotally mounted by a Bolt passed through its second hole from the Bush Wheel end to the centre hole of the Flat Trunnion on that side of the model. The resulting movement of the Strip 12 represents the apparatus that pays out the cotton from the reel.

#### Model No. 2.54 Anti-Aircraft Gun

#### HOW TO CONTINUE

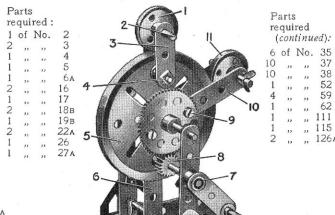

This completes our examples of models that may be made with MECCANO Outfit No. 2 (or No. 1 and No. 1A). The next models are a little more advanced, requiring a number of extra parts to construct them. The necessary parts are all contained in a No. 2A Accessory Outfit, the price of which may be obtained from any Meccano dealer.

# Model No. 3.1 Drilling Machine

# Model No. 3.2 Strip-Bending Machine

Model No. 3.3 Letter Balance

This model represents a device for bending bars or rods of metal to circular form, and may be put to practical purpose in shaping strips of tin or similar material. A loose Pulley 1 is spaced by a Collar and Washers in the centre of the short Rod 2 journalled in a  $1\frac{1}{2}$  Strip 3. The latter is secured to the end of a  $\frac{3}{4}$  Bolt 4 and spaced away from the 3" Pulley 5 by means of a number of Washers. The opposite end of the Rod is supported by a  $5\frac{1}{2}$ " Strip 6. The Handle 7 is secured to a  $3\frac{1}{2}$ " Rod carrying a  $\frac{1}{2}$ " Pinion 8. This engages with a 57-teeth Gear Wheel 9 mounted on another  $3\frac{1}{2}$ " Rod which is free to revolve in the boss of the Wheel 5. The Gear Wheel 9 carries a 3" Strip 10 forming one of the bearings for a short Rod carrying a second 1" loose Pulley 11. The latter is also spaced by means of a Collar and Washers so that it lies immediately above the groove of the Pulley Wheel 5. The material to be shaped is passed between the two loose Pulleys at the top of the Wheel 5, and on rotation of the handle 7 the arm 10 is caused to move downward so forcing the object to the same curvature as the circumference of the wheel.

The arrangement of the treadle is shown in detail in Fig. 3.19A. The Crank 1 is provided with a Flat Bracket, the round hole of which coincides with the elongated hole of the Crank, and receives the short Rod 2. The Crank 1 is free to turn about a Threaded Pin 3, secured to the 3" Pulley Wheel 4, and once the latter is set in motion it can be kept in rotation by working the treadle 5. The Strips 6 of the saddle (Fig. 3.19) are duplicated and their ends form slots to receive the flanges of the Angle Girders 7. The hand wheel 8 is a dummy one, but if desired it may be arranged to operate the saddle by an endless rope device.

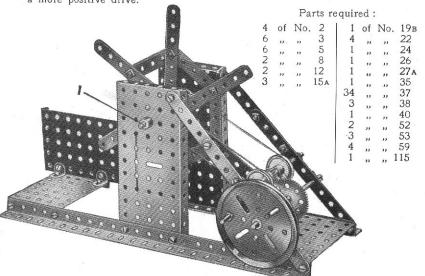

These Models can be built with MECCANO Outfit No. 3 (or No. 2 and No. 2A)

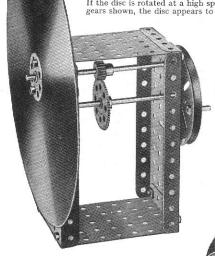

#### Model No. 3.21 Flax Cleaner

The six  $3\frac{1}{2}$ " Strips forming the rotating frame are fastened to a Bush Wheel that in turn is attached to the Rod 1. The  $3\frac{1}{2}$ " Strips are braced by six  $2\frac{1}{2}$ " Strips. The drive is transmitted from the operating shaft by means of endless cords. Two separate cords are used in order to secure a more positive drive.

#### Model No. 3.22 Newton's Disc

This model demonstrates that the colours of the spectrum, which are most simply produced by directing a ray of white light through a prism, can be re-combined to form white light. The cardboard disc is divided into equal sectors, and the seven colours of the spectrum—red, orange, yellow, green, blue, indigo, and violet—are painted on separate sectors. If the disc is rotated at a high speed by means of the hand wheel and the gears shown, the disc appears to be of a greyish-white colour.

The connecting arm is pivoted at its lower end to the Bush Wheel and at its upper end to the hand lever, a bolt and two nuts being used to pivot the arm in each case. The drive is transmitted to a 1" Pulley Wheel on the axle of the road wheels by means of a crossed belt passing round another 1" Pulley that is secured to a Rod connected via a 3:1 gear ratio to the 1½" Rod carrying the Bush Wheel. This Rod is journalled in a 3½" Strip fastened to the side Angle Girder, and also in a Double Bent Strip secured to the inside of the Girder.

The animal rocks about a short Rod secured between the rocker-frame which does duty as "legs."

This frame consists of two 3½" Strips 3 bolted at their upper ends to Cranks in which the short Rod is

#### Model No. 3.29 Pit Head Gear

The cage is raised and lowered by the cord 1 which is wound between two 3" Pulleys on the 41" Axle Rod 2. The Rod also carries a further 3" Pulley which is provided with a Threaded Pin to form the operating handle, while a 5%" Strip 3 secured by an Angle Bracket to the 5½" × 2½" Flanged Plate bears against the periphery of the Pulley and so serves as a brake. The Strip must be depressed slightly with the fingers whilst winding.

A Bush Wheel 4 on the Rod 2 carries a Threaded Pin that serves as the crank pin of a dummy engine, which is formed by a Sleeve Piece 5 fitted at each end with a 3" Flanged Wheel. The Sleeve Piece is mounted on a Pivot Bolt that is passed through its centre hole and lock-nutted to the Plate, being spaced from the latter by a Collar. A 2" Rod passes through the boss of one of the Flanged Wheels and carries at one end a Swivel Bearing, the "spider" of which is mounted loosely on the Threaded Pin. The Bolts securing the Fork Piece to the "spider" should be provided with Nuts to prevent their shanks gripping the Pin. A Crank Handle representing the exhaust steam pipe is secured by Bolts passed through the Boiler, and inserted in the tapped holes of a Coupling and a Collar.

The body is a  $2\frac{1}{2}$ " Strip, which is bolted at its lower end to a  $1\frac{1}{2}$ "  $\times \frac{1}{2}$ " Double Angle Strip 1 and is held upright by a  $\frac{1}{2}$ " Reversed Angle Bracket 2 secured to the Double Angle Strip. Both the latter parts are free to turn about a  $3\frac{1}{2}$ " Axle Rod, and the Double Angle Strip is connected pivotally with the treadle 3 by means of a  $2\frac{1}{2}$ " Strip. The treadle, in turn, is connected pivotally with the crankshaft by two further  $2\frac{1}{2}$ " Strips, each of the Bolts 7 being secured by two Nuts as in Standard Mechanism No. 262.

The Collar 4 is mounted loosely on a

I" Bolt secured rigidly to the Crank 5, and forms a handle by means of which the model may be set in motion. The grinding wheel 6 is driven from the 3" Pulley Wheel by an endless belta.

:	small and a larg	f a 5" Rod, which are secured a ge Fork Piece, the latter being Double Bracket 2 by means of a 2" Bolt.
No. 37A ,, 38 ,, 40 ,, 46 ,, 48 ,, 48	The hoisting co and is wound operated by a s the ½" loose Pu Flat Bracket or permanent ban	rd controlling the Hook 3 passes under a 3½" Rod 4 on a Crank Handle 5. The cord 6, which raises the jib, is econd Crank Handle 7. It passes over the 1" loose Pulley Wheel 8, round elley 9 (which is mounted on a Pivot Bolt) and is then led back again and tied to a the 1½" Rod that carries the Pulley 8. Each Crank Handle 5, 7 is provided with a d-and-pulley brake to prevent the jib or the load on the Hook 3 from falling when expeleased. The method of rotating the crane about its pivot is as follows:  "theologogical grades a 2½" Rod "theologogical grades a 2½" Rod "theologogical grades and the Sales

The hand wheel consisting of a Bush Wheel fitted with a Threaded Pin is fastened to a 3½ Rod journalled in two 1° × 1° Ångle Brackets which are bolted to the 2½ × 3½ Flanged Plate. This Rod carries a Worm Wheel that meshes with a 57-teeth Gear Wheel fastened to a 2° Rod. The support for this Rod is formed by a Double Bent Strip. Connection between this Rod and the body of the crane is made by means of a 1° Pulley Wheel, a 3° Pulley Wheel fastened to the base of the crane, and a crossed belt joining these two wheels. On rotation of the hand wheel the jib of the crane is, therefore, slowly rotated.

The 3" Pulley to which the swivelling portion of the crane is attached, slides on the rim of a second 3" Pulley secured to the base of the model by means of §" Bolts. These Bolts have Washers on their shanks to prevent damage to the rim of the Pulley.

#### Model No. 3.33 Fire Escape

The moving portion of the escape slides on the 12½" Angle Girders 4 of the fixed ladder and is guided by two ½" Reversed Angle Brackets 5. The cord for extending the ladder passes over the ½" loose Pulley 1 and is wound on the

Crank Handle 2. The Pulley 1 revolves freely on a  $\frac{3}{4}$ " Bolt that is secured by two Nuts to an Angle Bracket bolted to the  $3\frac{1}{2}$ " Strip.

A 3" Strip, weighted with a \(\frac{3}{4}\)" Flanged Wheel 6 to form a brake lever, is pivoted by a \(\frac{3}{6}\)" Strip 7, and a piece of cord is passed round the 1" Pulley 3 on the hoisting shaft, and tied to the Strip. The pressure of the weighted lever is sufficient to keep the ladder raised in any position.

#### Model No. 3.34 Auto Swing Boat

Model No. 3.35 Scales

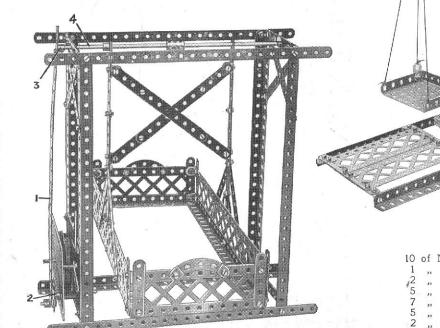

Parts required:

The connecting Strip 1 is attached pivotally at one end to a Threaded Pin secured to the Bush Wheel 2 on the driving spindle of the motor, and at the other end by means of Bolt and Lock-Nuts to a Crank 3 mounted on the shaft 4, which operates the swing boat.

Clockwork Motor (not included in Outfit)

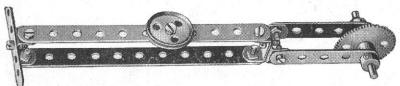

# Model No. 3.36 Car Lifting Apparatus

Four  $5\frac{1}{2}$ " Strips 1 are attached pivotally by lock-nutted Bolts to the  $12\frac{1}{2}$ " Angle Girders, which form the base of the model, and to the carrier 2, which receives the car. The Crank Handle 3 carries a  $\frac{1}{2}$ " Pinion meshing with a 57-teeth Gear on the Rod 4, which forms a drum for a length of cord attached to the carrier. The Rod runs freely in the transverse hole of a Coupling 6 that is secured to the upright Strip by a  $\frac{3}{8}$ " Bolt. A Threaded Pin carries the 1" Pulley 7 and its shank is inserted in the tapped hole of the Coupling, so that when the Pulley is rotated clockwise the Pin nips the Rod. The carrier 2 is returned to its original position by a length of elastic or Spring Cord 8.

Model No. 3.44 Flex Making Machine

The two wires to be twisted are fixed at one end of the machine to a Hook 1 which is attached by an End Bearing to the Crank Handle. At the other end the wires are looped over two Threaded Pins fixed by Collars to the spring controlled Rods 2. The  $3\frac{1}{2}'' \times 2\frac{1}{2}''$  Flanged Plate 3 carrying a  $3\frac{1}{2}''$  Rod is free to slide in the built-up channel girders, and as the Crank Handle is turned it is pushed ahead of the twisting wires, so keeping the finished flex even. As the wires shorten through twisting, the Rods 2 slide longitudinally, extending the Spring.

### Model No. 3.48 Fire Truck

The front axle is journalled in a 21 Double Angle Strip that is pivoted through its centre hole to a Double Bent Strip secured to the Flanged Plate 15. Steering is effected from the Pulley 13 secured on a 31" Rod that is passed through the 31" × 21" Flanged Plate 16, and held in position by Collars. On the lower end of the Rod is a Bush Wheel 14, which is connected to the pivoted Double Angle Strip by cords tied to opposite holes in the Bush Wheel and to the ends of the Double Angle Strip.

The lower part of the escape is mounted pivotally on Bolts 10 passed through the upturned ends of a 2\frac{1}{6}" \times 1" Double Angle Strip that is bolted to a 31" x 1" Double Angle Strip which, in turn, is supported on two vertical 21" x 1" Double Angle Strips. The upper or moving portion of the escape slides between the 121 Angle Girders 9 and is held freely in position by the Nuts of the Bolts 11.

The ladder is extended from the Crank Handle 2 (Fig. 3.48A) that is journalled in a 2½" × ½" Double Angle Strip bolted to a 5% Strip that, in turn, is bolted across the flanges of the Sector Plates. A Cord 7 is wound on to the Crank Handle and one of its ends is tied to a 21" Strip that spans the inner end of the 124" Strips forming the sides of the extending ladder.

Its other end 7a is then led towards the outer end of the fixed ladder, round a 1 loose Pulley held on a Bolt in the centre hole of a  $2\frac{1}{2}$  Double Angle Strip that spans the outer ends of the  $12\frac{1}{2}$ 

Girders 9, and finally is tied to the same 2\frac{1}{2}" Strip to which the end 7 is already attached. Thus by turning the handle 2 the escape is pulled inward or outward.

The Crank Handle 1 carries a 1" Pinion 3 that engages a 57-teeth Gear 4 secured to a Rod 12. A Cord 8 is wound a few turns round the Rod 12 and is then led to the 21%" Strip 5 where it is secured. By turning the Crank Handle the Cord is wound in, thus raising the pivoted escape.

On turning the handle in the opposite direction, the escape is lowered by its own weight.

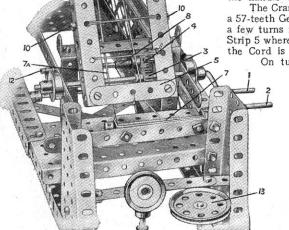

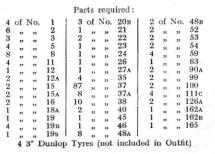

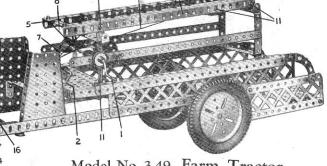

FIG. 3.48A

Model No. 3.49 Farm Tractor

The seat (a 11" Pulley) is secured on a Threaded Pin and attached to a pair of 24" Curved Strips. The latter are secured to two 51" Strips fixed in the bottom row of holes of the motor plates. A 21" Strip is pivoted to the Motor reversing lever by means of a Reversed Angle Bracket, and is supported by a 11 Strip which is attached pivotally to the Motor.

### Model No. 3.50 Pile Driver

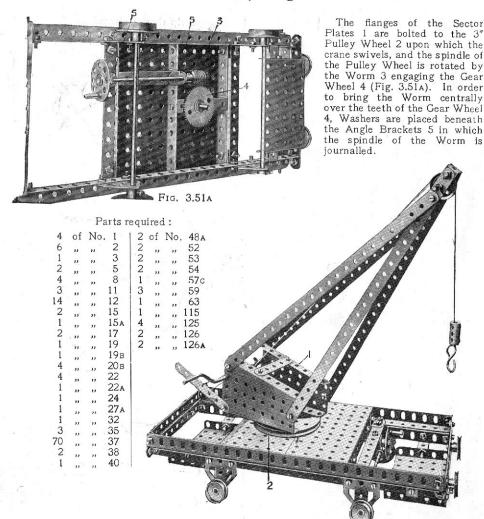

# On moving the hand lever 6 to the right a ½" Pinion on the hoisting shaft is brought into engagement with the 57-teeth Gear Wheel 1 on the driving shaft and the ram 4 is raised. The hoisting cord 2 is tied to an Angle Bracket 3, which lodges under another Angle Bracket bolted to the ram. The latter may be dropped whenever required by jerking the cord 5, thereby releasing the Brackets 3. The Strips 7 are duplicated, and the Girders 8 slide between their ends.

		1	of N	lo. 1	110	3	

Two pairs of  $5\frac{1}{2}$ " Strips are connected loosely towards their centres by means of Nuts and Bolts 1. The punch 2 consists of  $1\frac{1}{2}$ " Rod secured in the boss of a Crank 3, which is bolted to a Double Bracket secured at 4. A Spring 5 serves to open the handles atter the punch has been used; it is placed on the Rod 2 and held in position by means of a Collar 6, while its other end is attached to a  $\frac{8}{8}$ " Bolt 7 passed through one pair of  $5\frac{1}{2}$ " Strips. After passing through the paper the punch enters the end hole of a 3" Strip 8. The latter is bolted at 9 to a Double Bracket, while its other end passes beneath a similar bracket at 10.

# Model No. 3.57 Kinetograph

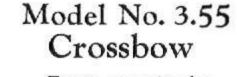

Most Meccano boys probably are aware of the principles of the Kinetograph, but for the benefit of those who have not seen one in action, we may mention that it is a device which imparts an appearance of animation to a series of pictures, each differing slightly from the other and passed in rapid succession before the eyes. In this respect it resembles the remarkable principle upon which the modern cinematograph is based.

In constructing the Meccano model the following details will prove useful:—The drum consists of a  $12\frac{1}{2}''$  Strip bent to form a circle, with its ends overlapping one hole, and bolted to eight vertical  $5\frac{1}{2}''$  Strips forming the sides. Two pairs of opposite  $5\frac{1}{2}''$  Strips are connected by  $3\frac{1}{2}''$  Strips and Angle Brackets bolted in the third holes from their lower ends. The  $3\frac{1}{2}''$  Strips cross at right angles to one another and are bolted in the centre to a Bush Wheel, in the boss of which is secured a short Rod forming the pivot of the revolving drum. This Rod is journalled in a Double Bent Strip bolted to a  $2\frac{1}{2}'' \times 1''$  Double Angle Strip 2. This, in turn, is secured to the base of the model by two  $1'' \times 1''$  Angle Brackets 3. A further bearing for the short Rod consists of a Crank bolted to the base of the model.

The drum is rotated from the Crank Handle 4, on which is mounted a  $\frac{1}{2}$ " Pinion engaging a 57-teeth Gear Wheel 5 secured to a  $3\frac{1}{2}$ " Rod carrying a Pulley Wheel 6. The latter is connected by means of a cord 7 to a similar wheel nipped to the vertical spindle of the drum. Bearings are provided for the inner ends of the Crank Handle and  $3\frac{1}{2}$ " Rod by a Double Angle Strip bolted between the Plate 8 and  $5\frac{1}{2}$ " Strip 9. The sighting box 10 is built up from a framework of Strips and is secured by means of a Crank 11 to a short vertical Rod rigidly mounted in the boss of the  $1\frac{1}{2}$ " Pulley 12. The four sides of the framework 10 are covered with some black material; stiff black paper suitable for this purpose may be obtained from any stationers. The drum is enclosed in the same way, but the covering paper should be cut in a strip measuring  $12\frac{1}{2}$ "  $\times 4\frac{1}{2}$ " and pierced with slots spaced  $1\frac{1}{2}$ " apart (from centre to centre) so that they fall exactly between the upright  $5\frac{1}{2}$ " Strips. The slots should measure  $1\frac{1}{2}$ "  $\times 2\frac{1}{2}$ ".

The type of drawing suitable for use in this model is shown in Fig. 3.57A, and the dimensions indicated therein should be followed carefully. No doubt Meccano boys will be able to devise numerous amusing pictures of a similar kind for themselves. The strip of stout white paper carrying the sketches is inserted in the bottom of the drum, as indicated at 13. The model is now ready for operation. Placing the frame 10 over the eyes, the line of vision is directed through the narrow end, where the Strips are held apart by means of Double Brackets, and through the slots in the drum. The latter should be rotated rapidly by operating the handle 4, and as it revolves, the little dog shown in Fig. 3.57A will be seen jumping over the fence with a most realistic and amusing action.

# Model No. 3.56 Horizontal Engine

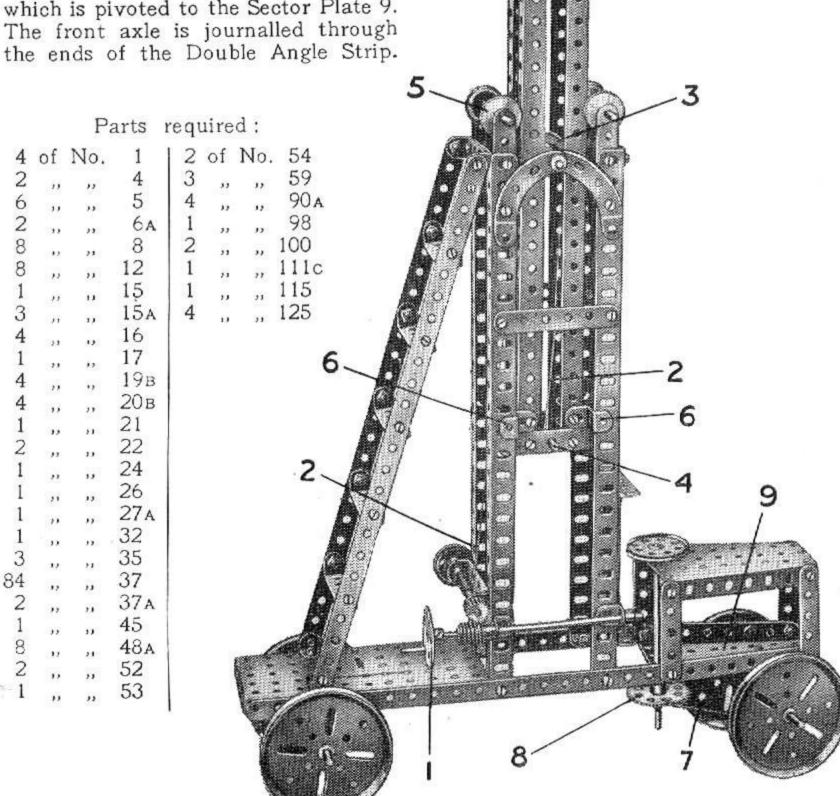

This model forms an interesting example of the use of the Meccano Boiler, Sleeve Piece and other new parts. The  $2\frac{1}{2}$ " Strip 1, forming the connecting rod, is attached to the  $1\frac{1}{2}$ " Pulley Wheel by means of a Threaded Pin. The latter is fastened in one hole of the  $1\frac{1}{2}$ " Pulley Wheel, and two Washers are placed upon it between the Strip 1 and the wheel. The connecting rod is held in place by a Collar locked to the end of the Threaded Pin. The Boiler is attached to the framework by means of two  $2\frac{1}{2}$ "  $\times \frac{1}{2}$ " Double Angle Strips attached by their centre holes to the side of the Boiler opposite the chimney. When the Boiler is placed in the position shown, the whole is secured by bolting the Double Angle Strips to the side Flanged Plates.

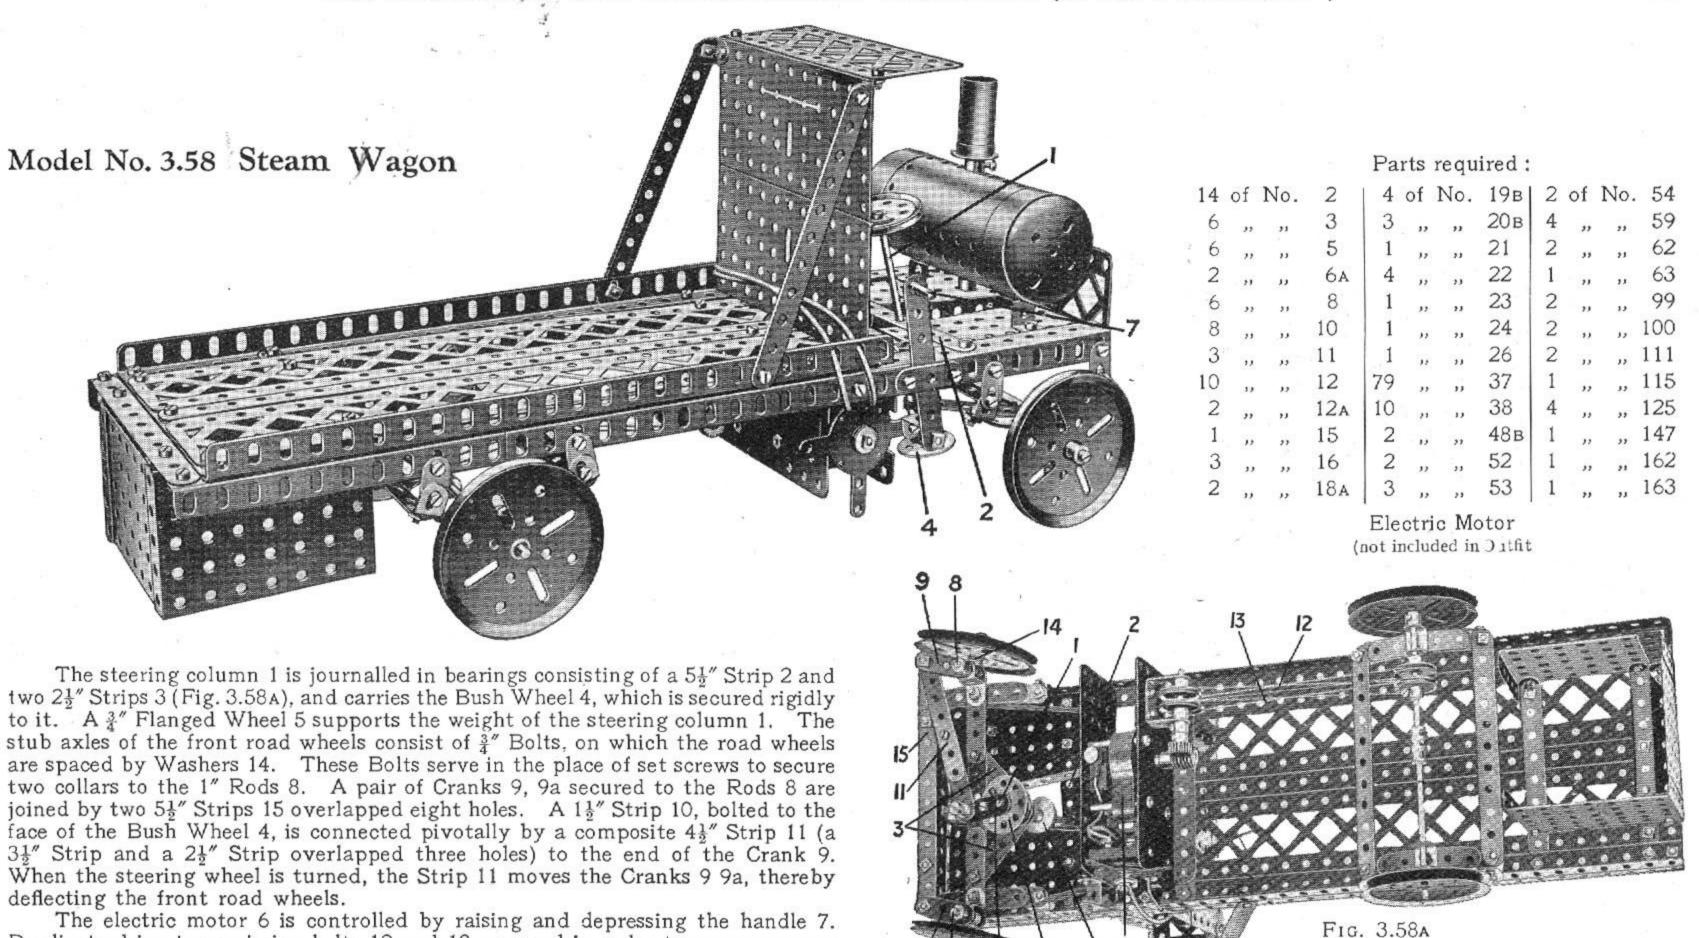

# 

Parts required:

# Model No. 3.57 Tower Wagon

When operated the handle 1 winds in the cord 2, which passes over a 1" fast Pulley Wheel 3 and is tied to the Rod 4. The upper part of the tower is thus raised or lowered as required, being guided by the  $\frac{3}{4}$ " Flanged Wheels 5 and two pairs of Reversed Angle Brackets 6. The steering cords 7 are tied to the 57-teeth Gear Wheel 8 and to the end of a  $2\frac{1}{2}$ "  $\times \frac{1}{2}$ " Double Angle Strip bolted to a Double Bent Strip, which is pivoted to the Sector Plate 9. The front axle is journalled through the ends of the Double Angle Strip.

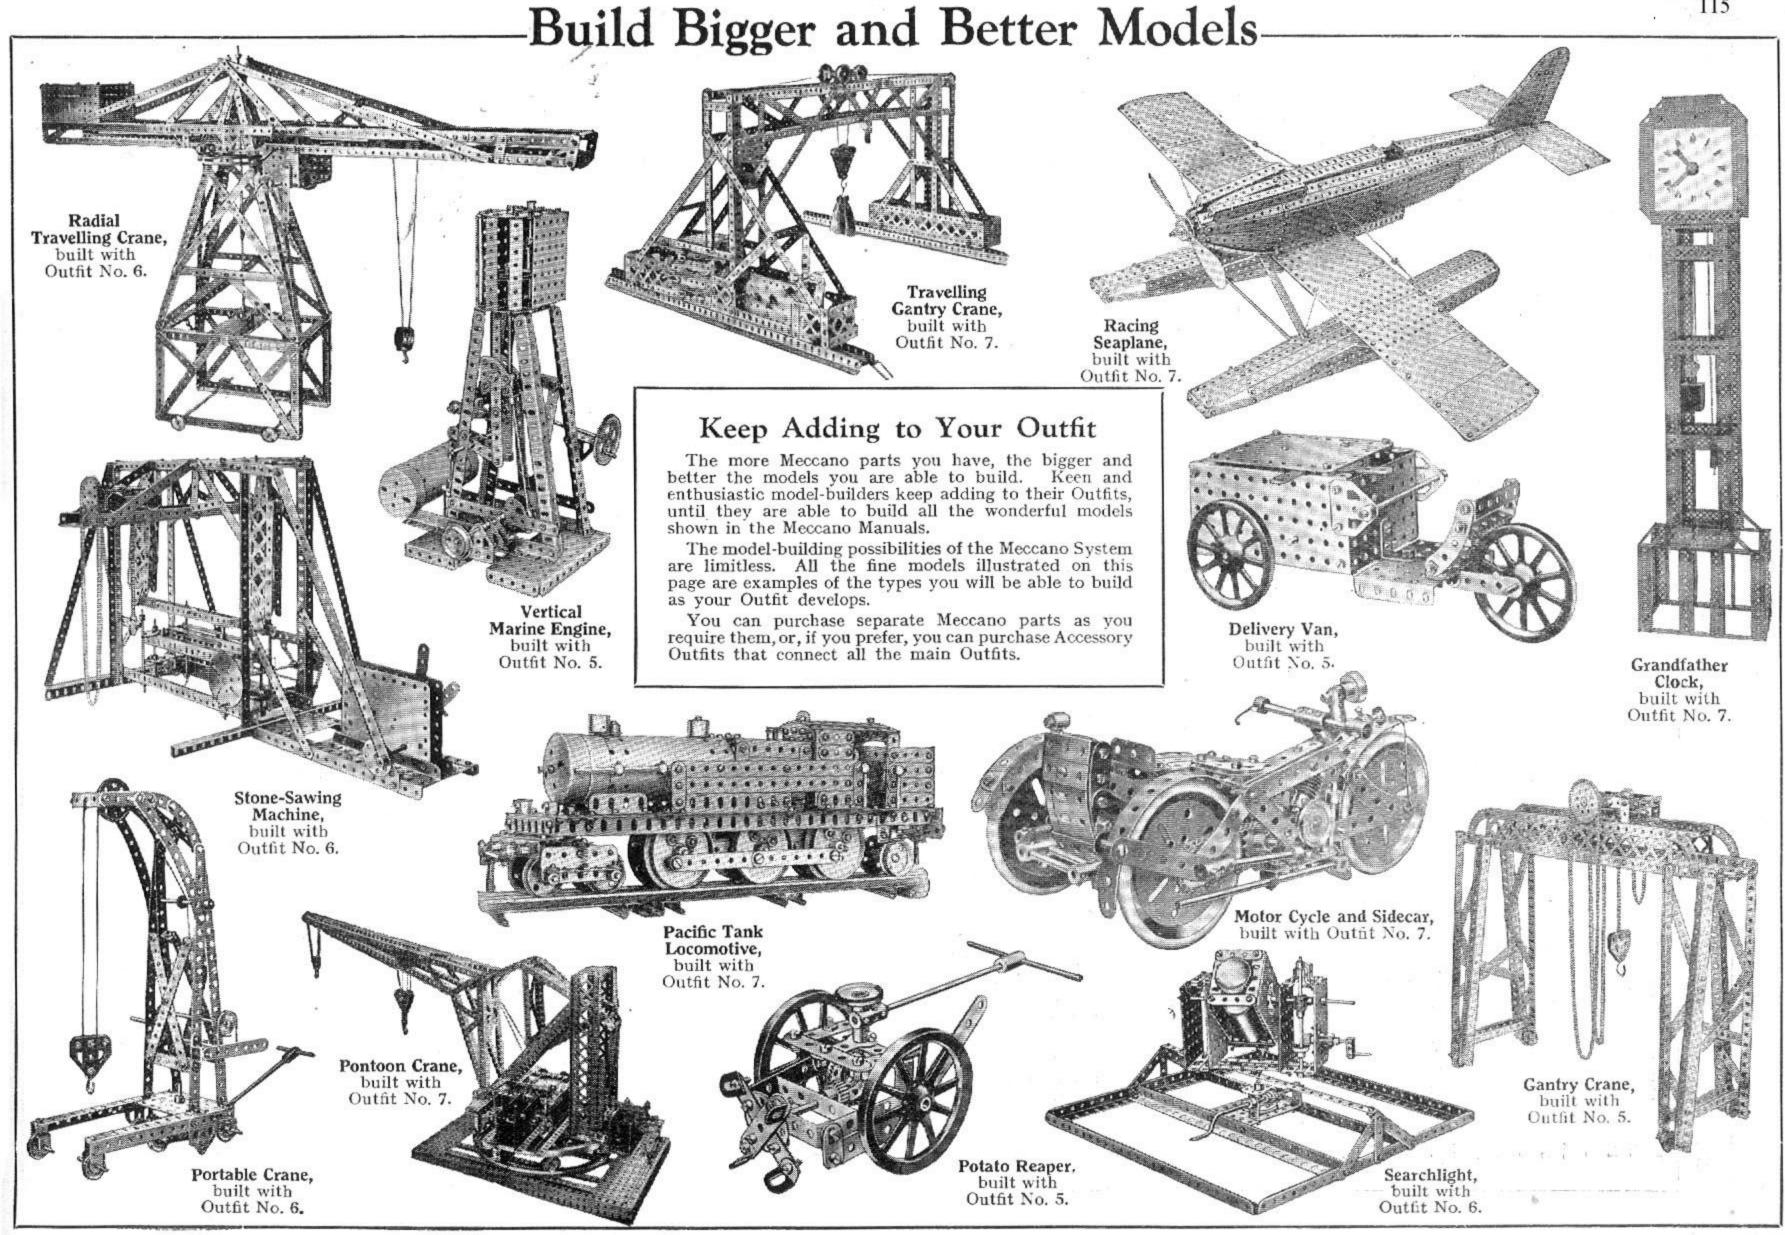

# HOW TO CONTINUE

Duplicate drive transmission belts 12 and 13 are used in order to secure a more

dependable drive to the rear axle.

This completes our examples of models that may be made with MECCANO Outfit No. 3. The next models are a little more advanced, requiring a number of extra parts to construct them. The necessary parts are all contained in a No. 3A Accessory Outfit, the price of which may be obtained from any Meccano dealer.

Full instructions for building a fine range of models are included with each Outfit.

# MECCANO

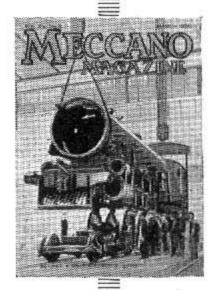

The Meccano Magazine is the Meccano boy's own newspaper. It tells him of the latest Meccano models; what Meccano Clubs are doing; how to correspond with other Meccano boys; the Competitions that are running, etc. It contains splendid articles on such subjects as Railways, Famous Engineers and Inventors, Electricity, Bridges, Cranes, Wonderful Machinery, Aeronautics, Latest Patents, Radio, Stamps, Photography, Books and other topics of interest to boys, including suggestions from Meccano boys for new Meccano parts and correspondence columns in which the Editor replies to his readers' enquiries. The publishing date is the first of each month. If you are not already a reader of the Meccano Magazine write to the Editor for full particulars, or order a copy from your Meccano dealer or from any newsagent.
