

INSTRUCTIONS for OUTFIT No. 1

COPYRIGHT BY MECCANO LIMITED BINNS ROAD, LIVERPOOL 13, ENGLAND

### MODEL-BUILDING WITH MECCANO

There is no limit to the number of models that can be built with Meccano — Cranes, Clocks, Motor Cars, Aeroplanes, Machine Tools, Locomotives — in fact everything that interests boys. A screwdriver and a spanner, both of which are provided in each complete Outfit, are the only tools necessary.

When you have built all the models illustrated in the Books of Instructions the fun is not over, it is just beginning. Now comes the chance to make use of your own ideas. First of all, re-build some of the models with small changes in construction that may occur to you; then try building models entirely of your own design. In doing this you will enjoy the real thrill of the engineer and the inventor.

### HOW TO BUILD UP YOUR OUTFIT

Meccano is sold in 12 different Outfits, ranging from No. OO to No. 10. Each Outfit can be converted into the next larger one by the purchase of an Accessory Outfit. Thus Meccano No. OO Outfit can be converted into No. O Outfit by adding to it a No. OOa Accessory Outfit. No. Oa Outfit would then convert it into a No. 1 and so on. In this way, no matter with which Outfit you begin, you can build it up by degrees until you have a complete No. 10 Outfit.

All Meccano parts are of the same high quality and finish, but the larger Outfits contain a greater quantity and variety, making possible the construction of more elaborate models.

### THE 'MECCANO MAGAZINE'

The 'Meccano Magazine' is published specially for Meccano boys. Every month it describes and illustrates new Meccano models, and deals with suggestions from readers for new Meccano parts and for new methods of using the existing parts.

There are model-building competitions specially planned to give an equal chance to the owners of small and large Outfits. In addition, there are splendid articles on such subjects as Railways, Famous Engineers and Inventors, Electricity, Bridges, Cranes and Aeroplanes, and special sections dealing with the latest Engineering, Aviation, Motoring

and Shipping News. Other pages deal with Stamp Collecting, and Books of interest to boys; and a feature of outstanding popularity is the section devoted to short articles from readers.

Write to the Editor, The Meccano Magazine, Binns Road, Liverpool 13, for particulars and a specimen copy. You can order the Magazine from your Meccano dealer, or from any newsagent.

### THE MECCANO GUILD

Every owner of a Meccano Outfit should join the Meccano Guild. This is a world-wide organisation, started at the request of Meccano boys. Its primary object is to bring boys together and to make them feel that they are all members of a great brotherhood, each trying to help others to get the very best out of life. Its members are in constant touch with Headquarters, giving news of their activities and being guided in their hobbies and interests. A leaflet containing full particulars of the Guild and an application form is included in this Book.

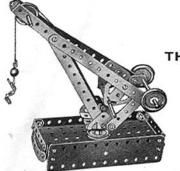

Clubs founded and established under the guidance of the Guild Secretary provide Meccano boys with opportunities of enjoying to the utmost the fun of model-building. Each has its Leader, Secretary, Treasurer and other officials. With the exception of the Leader, all the officials are boys, and as far as possible the proceedings of the clubs are conducted by boys.

### MECCANO SERVICE

The service of Meccano does not end with selling an Outfit and a Book of Instructions. If ever you are in any difficulty with your models, or if you want advice on anything connected with this great hobby, write to us. We receive hundreds of interesting letters from boys in all parts of the world, and each of these is answered personally and promptly by one of our staff of experts.

Whatever your problem may be, write to us about it. We shall be delighted to help you in any way possible. Address your letters to *Information Service*.

## HOW TO BEGIN THE FUN

This Dockside Crane can be built with Outfit No. 1

### THE MOST FASCINATING OF ALL HOBBIES

Meccano model-building is the most fascinating of all hobbies, because it never becomes dull. There is always something new to be done. First of all there is the fun of building a new model, and watching it take shape as part after part is added. Then, when the model is complete, comes the thrill of setting it to work just like the real structure it represents, by means of a Meccano Motor.

The following hints are given to show boys who are just starting the wonderful Meccano hobby how to get the greatest possible fun.

### A FEW USEFUL HINTS

It will be noticed that with each model in this Book of Instructions is given a list of the parts required to build it. For the first few models it is a good plan to lay out on the table all the parts required for the one it is proposed to build, and put the remainder of the Outfit to one side. To help you to pick out the correct parts for your model a complete list of Meccano parts is given at the back of this Book, and all the principal parts are illustrated. In the list the parts are all numbered, and in most cases their measurements are given. There is no need, however, to measure the parts to find out which is which, as the size is easily found from the number of holes. All Meccano holes are spaced  $\frac{1}{2}$ " apart, so that by counting two holes to the inch the size of a part can be found at once. For instance, Part No. 2 is listed as a  $5\frac{1}{2}$ " Perforated Strip, so you look in your Outfit for a Strip with eleven holes. Sîmilarly No. 189 is a  $5\frac{1}{2}$ "  $\times 1\frac{1}{2}$ "

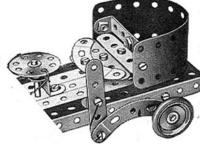

Flexible Plate, so you look for a Flexible Plate eleven holes in length and three holes in width. By the time a few models have been built the names of the parts will have become familiar.

Beginners sometimes wonder which section of a model should be built first. There cannot be any definite rule for this, as it depends on the design of the model. In stationary models the base usually should be built first. In most of the small models a  $5\frac{1}{2}'' \times 2\frac{1}{2}''$  Flanged Plate forms an important part of the structure, and often the best plan is to start building by bolting parts to this Plate. For other models a good general rule is that the sections that form supports for a number of other parts should be built first.

During the construction of a model it is best to screw up the nuts with the fingers, followed by a light turn with the screwdriver, leaving the final tightening until all the parts are connected up.

### THE IMPORTANCE OF LOCK-NUTTING

In some models it is necessary to join certain parts together so that, although they cannot come apart, they are free to pivot or move in relation to one another. To do this the parts are bolted together as usual, but the nut is not screwed up tightly, so that the parts are not gripped. Then, to prevent the nut from unscrewing, a second nut is screwed up tightly against it, the first nut being

A Flexible Plate
used to form a curved surface

held with a spanner. This method of using a second nut is known as Lock-nutting.

In building models in which Rods revolve in the holes of other parts it is important to make sure that such holes are exactly in line with one another. This can be done by pushing through the holes a Drift, Part No. 36c, or a Rod, before the Bolts holding the various parts are tightened up.

A Rod is usually mounted in a support or bearing so that it is free to revolve. The Rod is then said to be *Journalled* in the Strip.

### DRIVING YOUR MODELS

Models can be driven by means of either clockwork or electric motors. Ask your Dealer for particulars of Meccano Clockwork and Electric Motors.

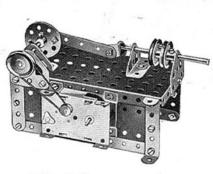

Small and light models may be driven direct from the driving pulley of the motor or through a belt running over two pulleys of the same size, giving what is known as a 1:1 (one-to-one) ratio. For large models it is necessary to take the drive from a small pulley on the motor shaft to a larger pulley on the driving shaft of the model. In most cases a 1" Pulley on the motor shaft and a 3" Pulley on the model shaft will be found

satisfactory. This provides a reduction ratio of approximately 3:1.]

Rubber bands are very convenient for driving belts. Sometimes, however, a rubber band of the right length is not available, and then Meccano Cord or thin string is used. To tie the Cord to form an endless belt, use the familiar reef knot.

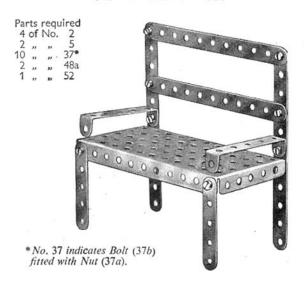

All Outfits from No. 2 upward include a Cord Anchoring Spring, Part No. 176. This part provides a neat and positive method of fastening a length of Cord to a Rod. The Spring is placed on a Rod by pushing and turning it in such a way that its coils tend to unwind.

Flexible Plates are used for forming curved surfaces in models, but they are not intended to be bent at right angles. With careful handling a Plate can be bent to the required curve and after use straightened again.

### Magic Motor (not included in Outfit)

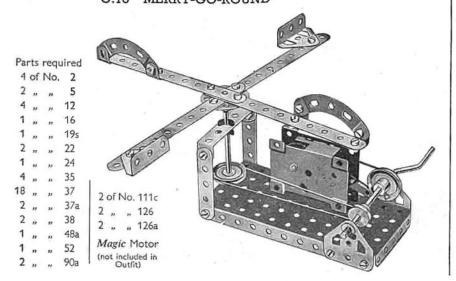

A Driving Band connects the pulley of the Magle Motor to a 1" Pulley fastened on the Crank Handle Larries also a 3" Pulley, which is connected by a second Driving Band with a further 1" Pulley fixed to the 33" Rod on which the sails are mounted. The 34" Rod is held in place by Spring Clips, one behind the Bush Wheel and one on its rear end. If a Motor is not used the 3" Pulley (supplied with Motor) is replaced by a 1" Pulley.

### O.14 INVALID CARRIAGE

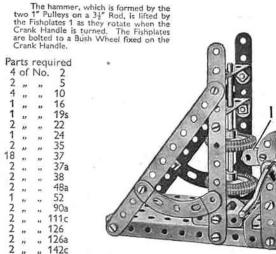

The Bush Wheel 1 is locked on a  $1^{\circ}$  Bolt journalled in a Trunnion attached to the Flanged Plate by the Bolt 2 (see Fig. 0.14a). The handlebar 3 is held by Spring Clips in two Angle Brackets bolted to the  $2\frac{1}{2}^{\circ} \times \frac{1}{2}^{\circ}$  Double Angle Strip.

### O.18 DERRICK CRANE

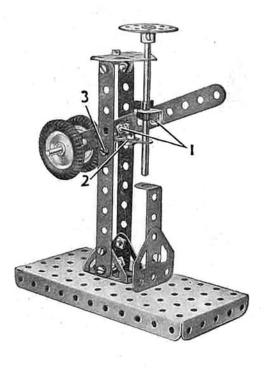

The construction of the model is commenced by bolting the Trunnions and Flat Trunnions that support the jib and Crank Handle respectively to the 5½ "X2½" Flanged Plate that forms the base of the model. The jib is then assembled and fastened to the Trunnions by means of the lock-nutted Bolts 1. The brake lever is a 2½" Strip and is fastened to a Fishplate bolted to the Flanged Plate. Bolts 1 are lock-nutted. A length of cord is fastened to the lever and then passed round the 1" Pulley on the Crank Handle.

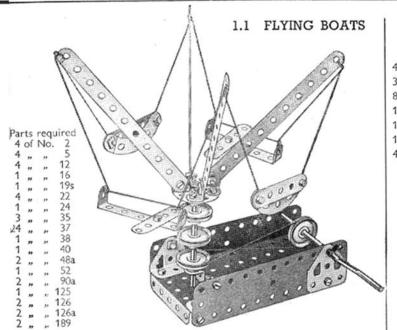

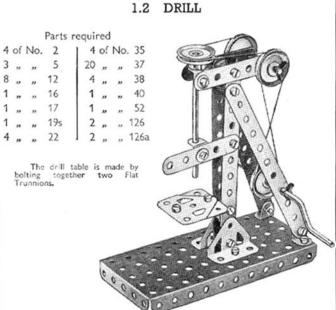

### O.21 PUNCHING MACHINE

### 1.6 KIDDIE CAR

### 1.7 SIDE TIPPING WAGON

# Parts required 3 of No. 38 1 Magic Motor (Not included in Outfit)

Each of the Bolts 1 is lock-nutted. A piece of Cord is fastened to the Rod 2 (Fig. 1.7a) wrapped round it two or three times, and then is taken through the hole in the Flanged Plate above the Rod and secured to the Angle Bracket 3.

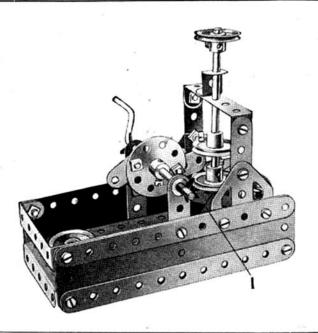

By turning the Bush Wheel the container is tipped sideways.

### 1.8 STAMPING MILL

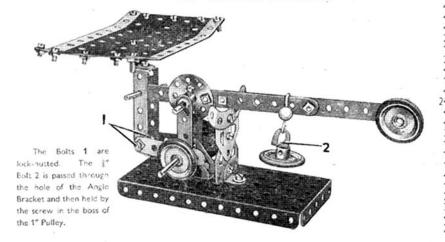

The anvil 1 is made up of two Trunnions bolted together. When the Crank Handle is rotatec, the Fishplates bolted to the Bush Wheel strike the centre 1" Pulley on the hammer shaft and cause it to rise and fall.

The hoisting cord is secured to the Crank Handle, and then led over the 2" Bolt 1. It is then passed through the pulley block and fastened to the jib at 2. The jib is attached to the Bush Wheel 3 by means of Angle Brackets and the complete unit is pivoted as follows. A # Bolt is passed through the 54" x 24" Flanged Plate from the underside, and is secured in the boss of the Bush Wheel by its set screw.

The sides of the jib are wheel (1) by two Angle Brackets (2), one on each side. A & Bolt is passed from the underneath side of Double Angle Strip (3) into the boss of the Bush Wheel (1) and the set screw is then tightened. The Flat Trunnions

4 of No.

at the lower end of the jib support the Crank Handle, which also passes through Fishplates bolted to the Angle Brackets (2) on the Bush Wheel (1). The Cord is fastened to the Crank Handle, and passes over the 2" Rod at the jib head.

### 1.21 TRIP HAMMER

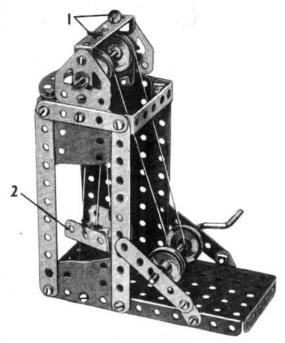

### 1.22 PITHEAD GEAR

A Cord is taken from each side of the lift cage over the 1" Pulleys and secured to each end of the Crank Handle. The Cords must both be the same length, otherwise the lift will tilt.

The two guides for the lift consist of two pieces of Cord fastened to the Washers (1). The Cords are then passed through holes in the Double Angle Strip, through two corresponding holes in the lift cage (2), and then through the two corresponding holes in the Flanged Plate. Two more Washers are tied to the Cords beneath the Flanged Plate to keep the Cords tight. The lift cage (2) is made up of two Trunnions.

Note: In the illustration part of the 5½"×1½" Flexible Plate forming one side of the tower is cut away to reveal the cage.

### HOW TO CONTINUE

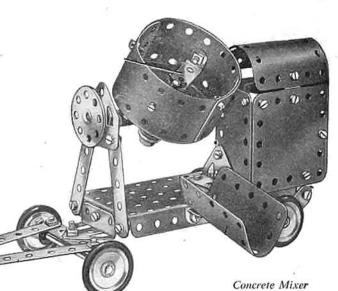

When you have built all the models shown in this Book of Instructions, you will be keen to build bigger and more elaborate models. Your next step is to purchase a Meccano No. 1a Accessory Outfit containing all the parts required to convert your No. 1 into a No. 2 Outfit. You will then be able to build the full range of No. 2 Outfit models.

If you prefer to do so, you can build up and develop your Outfit quite easily by adding various parts to it from time to time. The model-building possibilities of the Meccano system are unlimited, and the more Meccano parts you have the bigger and better the models you will be able to build.

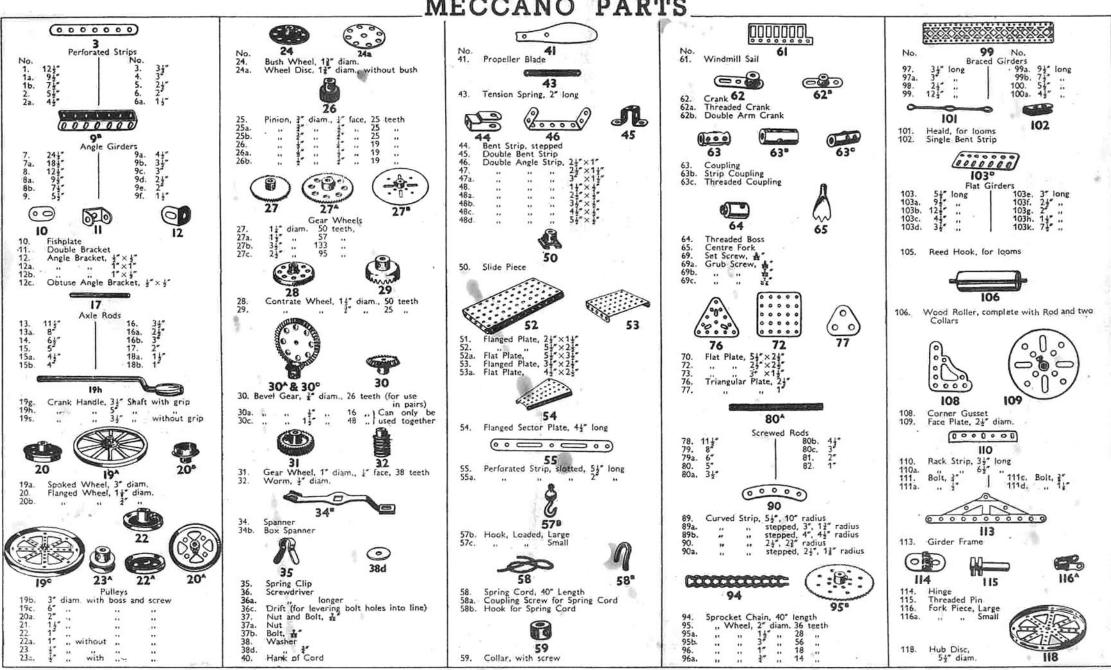

Here are five models selected from the range that can be built with Meccano No. 2 Outfit.

MECCANO PARTS

### MECCANO PARTS

### 0800000 120

120b. Compression Spring. A\* long

122. Loaded Sack

Cone Pulley, 1‡, 1" and 1" diam. Reversed Angle Bracket, 1" 125.

126. Trunnion

126a, Flat Trunnion

Bell Crank with Boss

Eccentric, Triple Throw, ‡" and ‡"
Eccentric, Single Throw, ‡"

133. Corner Bracket, 14" 133a

Crank Shaft, 1" stroke 134

1364

Handrail Support Handrail Coupling Wheel Flange

138a. Ship's Funnel

Flanged Bracket (right) 139a.

Universal Coupling

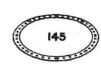

(to fit 2" diam. rim) 142a. Motor Tyre 142b.

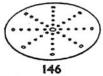

143. Circular Girder, 51° diam.

144. Dog Clutch

Circular Strip, 74° diam, overall 146. 146a.

Pawl, with Pivot Bolt and Nuts

147a. Pawl 147b. Pivot Bolts with 2 Nuts 147c. Pawl without boss Ratchet Wheel

Single Pulley Block Triple Pulley Block

154a. Corner Angle Bracket, ‡" (right-hand) 154b. Corner Angle Bracket, ‡" (left-hand) 155. Rubber Ring (for 1" Pulleys)

157. Fan, 2" diam

Channel Bearing, 11"×1"×1"
Girder Bracket, 2"×1"×1"

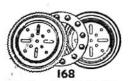

162 Boiler, complete, 5" long × 2½" diam.
"Ends, 2½" diam.× 3"
"without ends, 45" long × 2½" diam.
Sleeve Piece, 1½" long × ½" diam.
Chimney Adaptor, 3" diam.× 4" high

Swivel Bearing 167b. Flanged Ring, 91' diam,

168a. 168c. balls. 168d. Ball, & diam.

171. Socket Coupling

175. Flexible Coupling Unit

Anchoring Spring for Cord

Rod Socket Gear Ring, 34" diam. (133 ext. teeth, 95 int.)

Steering Wheel, 12" diam. Driving Band, 21" (Light) 186a. 186b. 10° (Heavy) 15" 186d. 186e. 187. Road Wheel, 24 diam. 187a. Conical Disc, 14 diam.

197 192 Flexible Plates 189. 192 190. Strip Plates.

198. Hinged Flat Plate, 41" × 21" 199. Curved Plate, U-Section

24" × 24" × 4" radius 24" × 24" × 14" radius

211^&211 211a Helical Gear, 1 Can only be used together

Rod and Strip Connector

215 Semi-Circular Plate, 24" Formed Slotted Strip, 3"

216 216. Cylinder, 24° long, 14° diam.
